NOKIA NOTIFICATIONS (II)

- The process of receiving notifications is straightforward. The application, implementing Client API, registers itself for receiving notifications by sending service specific *sender identification* (sender ID) to Nokia Notifications server.

- Nokia Notifications server responds by sending a device specific *registration identification* (registration ID, RID) to the client device.

- The client application then provides the RID for the 3rd party server, which implements Service API.

- Finally, the 3rd party server can send notifications, via Nokia Notifications server, for the devices whose registration ID it knows. It is the responsibility of the developer to implement a) client application with Client API and b) server with Service API.
