Mathematical Models in Population Biology and Epidemiology Fred Brauer, Carlos Castillo-Chavez, 2011-11-09 The goal of this book is to search for a balance between simple and analyzable models and unsolvable models which are capable of addressing important questions on population biology Part I focusses on single species simple models including those which have been used to predict the growth of human and animal population in the past Single population models are in some sense

the building blocks of more realistic models the subject of Part II Their role is fundamental to the study of ecological and demographic processes including the role of population structure and spatial heterogeneity the subject of Part III This book which will include both examples and exercises is of use to practitioners graduate students and scientists working in the field

Demographic Methods across the Tree of Life Roberto Salguero-Gomez, Marlène Gamelon, 2021-08-31 Demography is everywhere in our lives from birth to death Indeed the universal currencies of survival development reproduction and recruitment shape the performance of all species from microbes to humans The number of techniques for demographic data acquisition and analyses across the entire tree of life microbes fungi plants and animals has drastically increased in recent decades These developments have been partially facilitated by the advent of technologies such as GIS and drones as well as analytical methods including Bayesian statistics and high throughput molecular analyses However despite the universality of demography and the significant research potential that could emerge from unifying i questions across taxa ii data collection protocols and iii analytical tools demographic methods to date have remained taxonomically siloed and methodologically disintegrated This is the first book to attempt a truly unified approach to demography and population ecology in order to address a wide range of questions in ecology evolution and conservation biology across the entire spectrum of life This novel book provides the reader with the fundamentals of data collection model construction analyses and interpretation across a wide repertoire of demographic techniques and protocols It introduces the novice demographer to a broad range of demographic methods including abundance based models life tables matrix population models integral projection models integrated population models individual based models and more Through the careful integration of data collection methods analytical approaches and

applications clearly guided throughout with fully reproducible R scripts the book provides an up to date and authoritative overview of the most popular and effective demographic tools Demographic Methods across the Tree of Life is aimed at graduate students and professional researchers in the fields of demography ecology animal behaviour genetics evolutionary biology mathematical biology and wildlife management **Eucalypt Ecology** Jann Elizabeth Williams, John

Woinarski, 1997-11-13 The dominant trees of Australia eucalypts make up a remarkable genus This authoritative volume provides current reviews by active researchers of many disciplines including evolutionary history genetics distribution and modelling the relationship of eucalypts to fire and nutrients ecophysiology pollination and reproductive ecology interactions between eucalypts and other co existing biota including fungi invertebrates and vertebrates and conservation and management Together these reviews shed light on the reasons for the great success of eucalypts in Australian environments and provide a comprehensive summary for comparison with the ecology of major woody plant genera in other continents This volume is of particular relevance to Australian ecologists but also provides a stimulating perspective to students of vegetation ecology in all continents *The Population Structure of Vegetation* J. White, 2013-11-09 The Handbook of Vegetation

Science is growing After the first volumes under my editorship have appeared the interest of the scientific community has been revived and many new volume editors have started their work The present volume was jointly designed by Drs J White and W Beetsink Due to unforeseen developments Dr White signs now as the sole editor The development of this volume within the series had a special history as Dr White points out in his preface Adding to this I need only to state that I found it essential to include the topic of this volume into a Handbook of Vegetation Science It was included therefore in my first revised list of topics to be included in the Handbook when I took over from Dr T xen It is a great pleasure for me to see this volume appear Having read through the many contributions to this volume I can certainly congratulate Drs White and Beetsink for their success in generating so much interest in this volume among their colleagues The cooperation on this volume is the first sign that the new concept of the Handbook has been understood by the generation of scientists which I have to address The influence this volume will have on the field of plant population studies only time can tell It appears to me however that this volume will become a standard resource for some future Dr White asked me to have this volume dedicated to Dr Rabotnov
