Data Mining and Machine Learning in Cybersecurity Sumeet Dua,Xian Du,2016-04-19 With the rapid advancement of information discovery techniques machine learning and data mining continue to play a significant role in cybersecurity Although several conferences workshops and journals focus on the fragmented research topics in this area there has been no single interdisciplinary resource on past and current works and possible Introduction to Machine Learning, third edition Ethem Alpaydin,2014-08-22 A substantially revised third edition of a comprehensive textbook that covers a broad range of topics not often included in introductory texts The goal of machine learning is to program computers to use example data or past experience to solve a given problem Many successful applications of machine learning exist already including systems that analyze past sales data to predict customer behavior optimize robot behavior so that a task can be completed using minimum resources and extract knowledge from bioinformatics data Introduction to Machine Learning is a comprehensive textbook on the subject covering a broad array of topics not usually included in introductory machine learning texts Subjects include supervised learning Bayesian decision theory parametric semi parametric and nonparametric methods multivariate analysis hidden Markov models reinforcement learning kernel machines graphical models Bayesian estimation and statistical testing Machine learning is rapidly becoming a skill that computer science students must master before graduation The third edition of Introduction to Machine Learning reflects this shift with added support for beginners including selected solutions for exercises and additional example data sets with code available online Other substantial changes include discussions of outlier detection ranking algorithms for perceptrons and support vector machines matrix decomposition and spectral methods distance estimation new kernel algorithms deep learning in multilayered perceptrons and the nonparametric approach to Bayesian methods All learning algorithms are explained so that students can easily move from the equations in the book to a computer program The book can be used by both advanced undergraduates and graduate students It will also be of interest to professionals who are concerned with the application of machine learning methods **State of the Art in AI Applied to Ambient Intelligence** Juan Carlos Augusto,Andrea Orlandini,2017-10-15 We are moving towards a future where environments respond to human preferences and needs In this world smart devices equipped with intelligent features and the capability to sense communicate with and support humans in daily activities will be unremarkable We already expect our cars to warn us of hazards track our location and provide timely route advice and in future we will speak to simple machines and hold conversations with more complex systems such as intelligent homes which will help us to monitor conditions track routine tasks and program the heating lighting garden watering and entertainment centre But questions have been raised in recent years as to how intelligent these so called smart systems or ambient intelligence environments really are This book State of the Art in AI Applied to Ambient Intelligence part of the outcome of the Workshop on Artificial Intelligence Techniques for Ambient Intelligence AITAmI which has now run for 10 consecutive editions aims to provide a

clear picture of what has been achieved after a decade of discussion It is representative of the diversity of approaches and issues which are currently being considered and also indicates those avenues which are the most promising for exploration in the next decade The book provides all those working in the field with an up to date reference where they will find inspiration to create better systems for the society of tomorrow **Critiquing Generative AI in Africa's Media Ecosystems** Lungile

A. Tshuma, Trust Matsilele, 2025-11-17 This book takes a critical approach to the rise of Artificial Intelligence AI within the media and communication landscape The book argues that as technology is a social construct reflecting existing power dynamics those in the Global South and in Africa in particular are bound to be marginalised and have their knowledge systems overlooked as the Global North dominates technological developments The birth of AI has ignited debates about its benefits to lower income countries with some highlighting its potential to advance businesses and grow economies However this book argues that AI tools have been produced to serve Western needs and that instead there is a need for countries in Africa to have home grown solutions defined by local values Drawing on case studies and analysis from across the continent the book seeks to caution challenge and proffer solutions to the use and understanding of Generative AI for media and communication in non western societies At a time when generative AI is threatening to shape the future of media and communication around the world this book is a vital and timely contribution to debates within critical data studies and African media studies Modeling and Optimization of Signals Using Machine Learning Techniques Chandra
