The Family Systems Test (FAST) Thomas M. Gehring, Marianne Debry, Peter K. Smith, 2013-02-01 The Family System Test FAST developed by Thomas M Gehring is an important new tool for investigating family relations Based on the structural systemic theory of families it is a figural technique for representing emotional bonds cohesion and hierarchical structures in the family or similar social systems In this unique volume the editors draw on current theory and research in family or similar social systems together with a variety of empirical studies that have used the FAST to provide a comprehensive overview and assessment of the test and its use in various clinical research contexts The book is divided into four sections each focusing on a different aspect of the FAST Part 1 describes the concepts and psychometric properties of the FAST within the context of theoretically and empirically relevant aspects of the field of family psychology as a whole Special emphasis is given to systematic structural approaches to assessing individual and family functioning Part II focuses on the use of the FAST in developmental research For example the the FAST has been used to show how family constructs are influenced by age type of family and situation Part III deals with cross cultural issues and compares the interpersonal constructs of Japanese and Chinese families to Western families Finally Part IV addresses the applications of the FAST in clinical setting in diagnosis of biopsychosocial problems and planning and evaluation of clinical interventions The result is a book that helps to bridge the gap between theory practice and research It will be essential reading for users of the FAST and all clinicians and researchers who work in family relations and development

**The Diagnostic System** Jason Schnittker, 2017-08-08 Mental illness is many things at once. It is a natural phenomenon that is also shaped by society and culture. It is biological but also behavioral and social. Mental illness is a problem of both the brain and the mind, and this ambiguity presents a challenge for those who seek to accurately classify psychiatric disorders. The leading resource we have for doing so is the American Psychiatric Association's Diagnostic and Statistical Manual, but no edition of the manual has provided a decisive solution, and all have created controversy. In *The Diagnostic System*, the sociologist Jason Schnittker looks at the multiple actors involved in crafting the DSM and the many interests that the manual hopes to serve. Is the DSM the best tool for defining mental illness? Can we insure against a misleading approach? Schnittker shows that the classification of psychiatric disorders is best understood within the context of a system that involves diverse parties with differing interests. The public wants a better understanding of personal suffering. Mental health professionals seek reliable and treatable diagnostic categories. Scientists want definitions that correspond as closely as possible to nature. And all parties seek definitive insight into what they regard as the right target. Yet even the best classification system cannot satisfy all of these interests simultaneously. Progress toward an ideal is difficult, and revisions to diagnostic criteria often serve the interests of one group at the expense of another. Schnittker urges us to become comfortable with the socially constructed nature of categorization and accept that a perfect taxonomy of mental health disorders will remain elusive. Decision making based on evolving though fluid understandings is not a weakness but an adaptive strength of the mental health profession, even if it is not a solid foundation for scientific discovery or a reassuring framework for patients.
