

- Survival of the fittest

The neck of the giraffe:

- Forefathers or giraffes had short necks and short limbs.
- They had to compete for limited food available on the ground.
- Some members of the group acquired variations developing long limbs and long necks.
- These changes helped them to obtain foliage from the upper branches of the trees.
- As a result they could evade competition and gain advantage over the other members with short necks and short limbs.
- Thus present day giraffes evolved by accumulating favorable variations.

'The Hot Dilute Soup' was a phrase used by Haldane. According to the theory of chemical evolution, in this soup, molecules interacted and aggregated to form more complex molecules called coacervates.

OR

Construct the sequence of major events of organic evolution with the help of a schematic diagram. Give two examples of problem solving ability of chimpanzees.

3 + 2 = 5

Answer: Organic evolution is the theory that more recent types of plants and animals have their origins in other pre-existing forms and that the distinguishable differences between ancestors and descendents are due to modifications in successive generations.
