Singh, Yaroslav D. Sergeyev, Andreas Fischer, 2021-08-23 This volume explores the connections between mathematical modeling computational methods and high performance computing and how recent developments in these areas can help to solve complex problems in the natural sciences and engineering The content of the book is based on talks

and papers presented at the conference Modern Mathematical Methods and High Performance Computing in Science Technology M3HPCST held at Inderprastha Engineering College in Ghaziabad India in January 2020 A wide range of both theoretical and applied topics are covered in detail including the conceptualization of infinity efficient domain decomposition high capacity wireless communication infectious disease modeling and more These chapters are organized around the following areas Partial and ordinary differential equations Optimization and optimal control High performance and scientific computing Stochastic models and statistics Recent Trends in Mathematical Modeling and High Performance Computing will be of interest to researchers in both mathematics and engineering as well as to practitioners who face complex models and extensive computations

*Fuzzy-Like Multiple Objective Multistage Decision Making* Jiuping Xu,Ziqiang Zeng,2014-02-07

Decision has inspired reflection of many thinkers since the ancient times With the rapid development of science and society appropriate dynamic decision making has been playing an increasingly important role in many areas of human activity including engineering management economy and others In most real world problems decision makers usually have to make decisions sequentially at different points in time and space at different levels for a component or a system while facing multiple and conflicting objectives and a hybrid uncertain environment where fuzziness and randomness co exist in a decision making process This leads to the development of fuzzy like multiple objective multistage decision making This book provides a thorough understanding of the concepts of dynamic optimization from a modern perspective and presents the state of the art methodology for modeling analyzing and solving the most typical multiple objective multistage decision making practical application problems under fuzzy like uncertainty including the dynamic machine allocation closed multiclass queueing networks optimization inventory management facilities planning and transportation assignment A number of real world engineering case studies are used to illustrate in detail the methodology With its emphasis on problem solving and applications this book is ideal for researchers practitioners engineers graduate students and upper level undergraduates in applied mathematics management science operations research information system civil engineering building construction and transportation optimization
