

Science Open Response Rubrics

Many lab activities or quizzes have short answer questions at the end. The hardest part of teaching is helping students "know" how to write an answer which uses the scientific terminology and provides the needed "evidence" to support their answer.

Questions or Open Response without parts:

This rubric is designed to encourage student to attempt to respond by rewarding them with at least a one. It is also an excellent resource for providing feedback to the student because it breaks down the answer based on the quality of the response.

Notes: I allow students up front I will not give a one if a student writes phrase like "I don't know" it must be a "reasonable attempt", which is different for each student. I have them write what they don't understand to show they read the question.

	4	3	2	1	0
Open Response to Rubric (A)	Accurately answered the question correctly using the required scientific term(s) and/or requested supported the answer with specific explanation or evidence to support the answer.	Correctly answered the question with minor errors related to required scientific term and provided a general explanation with no evidence to support the answer.	Answered the question but the response was vague or incorrect but it requested no explanation was provided.	Attempted to answer the question but the response did not relate to the question being asked.	Refused to answer the question.

This rubric is designed to encourage student respond with an answer related to the question even if it is incorrect and no credit is given for a random answer.

Notes: I use this rubric for students who need to be pushed to write better answers and are already attempting to answer questions. This is also an excellent rubric when I have students who I am working to improve their open response answer for state standards.

Open Response to Rubric (B)	Accurately answered the question correctly using the required scientific term(s) and/or requested supported the answer with specific explanation or evidence to support the answer.	Correctly answered the question with minor errors related to required scientific term and provided a general explanation with no evidence to support the answer.	Correctly answered the question using general scientific terminology but the explanation was incorrect.	Answered the question but the response was vague or incorrect and no explanation was provided.	Attempted to answer the question but the response did not relate to the question being asked.
