Philips Telescope User Manual:

User's Manual for the NRAO 12 M Millimeter-wave Telescope, Kitt Peak, Arizona National Radio Astronomy Observatory (U.S.),1990 The Science and Art of Using Telescopes Philip Pugh,2009-10-03 Amateur astronomers have to start somewhere Most begin by buying a modest astronomical telescope and getting to know the night sky After a while many want to move on to the next stage but this can be problematic The magazines advertise a mass of commercially made equipment some of it very expensive which can represent a major financial outlay The trick is to choose the right equipment and then use it to its fullest extent Observing Skills The Science and Art of using Astronomical Telescopes provides the required information First it explains how to get the best from entry level equipment that upgrade may not even be needed for a year or two Second it explains how to select equipment that is at the next level and describes how use more advanced telescopes and accessories The book is organized according to observational targets and although it concentrates mainly on visual observing it concludes with a section on imaging and the equipment currently available from regular digital cameras through webcams to specialized chilled chip CCD cameras Observing Skills The Science and Art of using Astronomical Telescopes is the perfect follow up to Moore and Watson Astronomy with a Budget Telescope and Tonkin AstroFAQs It neatly fills the gap between these introductory books and the more advanced books in Springer s Practical Astronomy list **A User's Guide to the Meade LXD55 and LXD75 Telescopes** Martin Peston,2010-04-28 I have owned telescopes for over 25 years since I was a young lad I purchased an LXD55 AR 6 Refractor in 2002 and was one of the first to own one in the UK I am also a proud owner of an LXD75 SC 8 Armed with these two very different telescopes I have spent many hours searching the skies for interesting objects using Meade s Autostar Goto facility My motivation to write a book about the LXD Goto telescope series first came from comments about an LXD55 AR 6 Refractor review that was published on the LXD55 com website From then on I have had regular emails from people asking technical questions about the telescope and which model is best suited for them Whilst attending Star parties in the UK I found that many LXD owners would struggle to use them even at a basic level especially if they have never owned or used an equatorially mounted Goto telescope before Since the first LXD55 models came out in early 2002 owners have struggled to find useful information to help them use the telescopes to the best advantage There have been mixed reactions about its quality and performance Hence this book is directed towards those who are new to Goto and the LXD telescope **Star Ware** Philip S. Harrington,2011-02-25 Praise for Star Ware Star Ware is still a tour de force that any experienced amateur will find invaluable and which hardware minded beginners will thoroughly enjoy Robert Burnham Sky distributors dealers and conventions and corporate listings for products and services *Lunar and Planetary Webcam User's Guide* Martin Mobberley,2006-08-03 In the last few years cheap webcams have revolutionized amateur astronomy by providing a very inexpensive alternative to purpose made astronomical CCD cameras which use refrigerated imaging chips and are thus extremely expensive Webcams are capable of more

advanced work than normal digital cameras because their simple construction makes it easy to remove the webcam's lens allowing it to be interfaced directly to a telescope Using a webcam is not difficult but most amateur astronomers who have tried to do this do not achieve the finest results despite the webcam's potential There are numerous imaging and image processing tricks and techniques and all of them are needed to get the best results Along with webcam technology has come simple to use image processing and enhancement using a PC the most powerful technique is stacking in which the best images out of hundreds are selected and summed automatically to provide startlingly good results Lunar and Planetary Webcam User's Guide demystifies the jargon of webcams and computer processing and provides detailed hints and tips for imaging the Sun Moon and planets with a webcam He looks at each observing target separately describing and explaining all specialised techniques in context Glance through the images in this book to see just how much you can easily achieve by using a webcam with your telescope
