allowed operations to be extended up to 1550 nm In recent years significant progress has been achieved both by improving the performance of Si based photodetectors in the visible range and by extending their operation to infrared wavelengths Near infrared NIR SiGe photodetectors have been demonstrated to have a zero change CMOS process flow while the investigation of new effects and structures has shown that an all Si approach could be a viable option to construct devices comparable with Ge technology In addition the capability to integrate new emerging 2D and 3D materials with Si together with the capability of manufacturing devices at the nanometric scale has led to the development of new device families with unexpected performance Accordingly this Special Issue of Micromachines seeks to showcase research papers short communications and review articles that show the most recent advances in the field of silicon photodetectors and their respective applications

Recent Advances in Technology Research and Education Yukinori Ono,Jun

Kondoh,2024-02-29 This book presents the 20th edition of the Inter Academia Conference which aims to be a valuable resource for academic institutions in search for novel approaches for a global education for industry partners exploring new fundamental research ideas for government bodies seeking international projects that promote sustainable growth and most certainly for the global scientific community more and more invested in the multi disciplinarity of modern research Interdisciplinary research collaboration is crucial for solving many pressing issues and challenges facing society today Bringing together researchers and educators from different disciplines allows a more holistic understanding of complex problems providing also the opportunity for new learning and for collaboration on complex projects Beyond its scientific merits and value Inter Academia also promotes a culture of intellectual diversity innovative thinking and global perspective that can foster breakthrough discoveries unexpected advancements in research and last but not least a sense of belonging to a global community Being established in 2002 the Inter Academia Community currently gathers researchers from 14 leading Universities in Eastern and Central Europe together with Shizuoka University in Japan As such the Inter Academia Community serves as a strong bond across continents allowing the development of a number of global projects for student and researcher mobility with a significant impact on the broader scientific community The peer reviewed papers included in this book hopefully stimulate further interactions and collaborations covering both fundamental and applied research with benefits for the global society

Advanced Optical Spectroscopy Techniques for Semiconductors Masanobu

Yoshikawa,2023-03-23 This book focuses on advanced optical spectroscopy techniques for the characterization of cutting edge semiconductor materials It covers a wide range of techniques such as Raman infrared photoluminescence and cathodoluminescence CL spectroscopy including an introduction to their physical fundamentals and best operating principles Aimed at professionals working in the research and development of semiconductors and semiconductor materials this book looks at a broad class of materials such as silicon and silicon dioxide nano diamond thin films quantum dots and gallium oxide In addition to the spectroscopic techniques covered this book features a chapter devoted to the use of a scanning electron

transmission microscope as an excitation source for CL spectroscopy Written by a practicing industry expert in the field this book is an ideal source of reference and best practices guide for physicists as well as materials scientists and engineers involved in the area of spectroscopy of semiconductor materials Further this book introduces the cutting edge spectroscopy such as optical photothermal IR and Raman spectroscopy or terahertz time domain spectroscopy THz TDS etc
