Nonassociative Mathematics and its Applications Petr Vojtěchovský, Murray R. Bremner, J. Scott Carter, Anthony B. Evans, John Huerta, Michael K. Kinyon, G. Eric Moorhouse, Jonathan D. H. Smith, 2019-01-14

Nonassociative

mathematics is a broad research area that studies mathematical structures violating the associative law $x(yz) \neq (xy)z$. The topics covered by nonassociative mathematics include quasigroups, loops, Latin squares, Lie algebras, Jordan algebras, octonions, racks, quandles and their applications. This volume contains the proceedings of the Fourth Mile High Conference on Nonassociative Mathematics held from July 29–August 5, 2017, at the University of Denver, Denver, Colorado. Included are research papers covering active areas of investigation, survey papers covering Leibniz algebras, self-distributive structures and rack homology, and a sampling of applications ranging from Yang-Mills theory to the Yang-Baxter equation and Laver tables. An important aspect of nonassociative mathematics is the wide range of methods employed, from purely algebraic to geometric, topological and computational, including automated deduction, all of which play an important role in this book.

Brainlesion: Glioma, Multiple Sclerosis, Stroke and Traumatic Brain Injuries Alessandro Crimi, Spyridon Bakas, 2021-03-25. This two-volume set LNCS 12658 and 12659 constitutes the thoroughly refereed proceedings of the 6th International MICCAI Brainlesion Workshop, BrainLes 2020, the International Multimodal Brain Tumor Segmentation BraTS challenge and the Computational Precision Medicine Radiology Pathology Challenge on Brain Tumor Classification CPM RadPath challenge. These were held jointly at the 23rd Medical Image Computing for Computer Assisted Intervention Conference MICCAI 2020 in Lima, Peru, in October 2020. The revised selected papers presented in these volumes were organized in the following topical sections: brain lesion image analysis (16 selected papers from 21 submissions), brain tumor image segmentation (69 selected papers from 75 submissions) and computational precision medicine radiology pathology challenge on brain tumor classification (6 selected papers from 6 submissions). The workshop and challenges were held virtually.

Information Search, Integration and Personalization Dimitrios Kotzinos, Yeow Wei Choong, Nicolas Spyrtatos, Yuzuru Tanaka, 2016-05-05. This book constitutes the refereed post-proceedings of the 9th International Workshop on Information Search, Integration and Personalization, ISIP 2014, held in Kuala Lumpur, Malaysia, in October 2014. The 6 revised full papers and one invited paper presented were carefully reviewed and selected from 19 presentations. The papers are organized around the following topics: information search in large data sets, databases, digital libraries, data warehouses, comparison of different information search technologies, approaches and algorithms, novel approaches to information search, personalized information retrieval and personalized web search, data analytics, data mining, data warehousing, integration of Web services, knowledge bases, digital libraries, federation of smart objects.

ICT Diffusion and Environmental Sustainability, 2nd edition Muhammad Majeed, Mara Madaleno, Muhammad Tayyab Sohail, 2025-09-16. Recently the adoption of information and communication technologies (ICT) has increasingly been recognized as crucial for economic prosperity, human development and well-being along with sustainable development. World Summit on the Information Society (WSIS) Forum emphasizes the role of ICT adoption in sustainability with due regard to the 2030 Agenda for Sustainable Development. The research has largely documented favorable economic outcomes of increasing the use of ICT. However, the

ecological dimensions of ICT have received the least attention in the literature. In effect, ICT has influenced human life from many perspectives including ecological aspects of life. The links of ICT with the environment are rather complex. On the one hand, ICT growth deteriorates the environment by increasing the production, use, and disposal of ICT products. For instance, increasing e-waste and larger use of energy in manufacturing cause adverse effects on the environment. The life cycle theory of ICT suggests that several stages of the life of ICT result in pollution. The life cycle of ICT-related products spans over production, delivery, transport, use, and disposal. On the other hand, ICT is considered a solution to reinforce environmental protection, mitigate the adverse impacts created in the environment by human activities, and address key environmental challenges such as climate change and sustainability. This Research Topic aims to invite world-class cutting-edge research on how individuals, businesses, societies, and governments adopt various types of ICT for enhancing diverse forms of economic and environmental sustainability, i.e., ecological, economic, social, cultural, and political. Particularly, this Research Topic is devoted to addressing scholars from social sciences, business studies, energy research, economics research, and environmental fields of research who are willing to combine strong theoretical underpinnings and world-class empirical evidence. Since the association between ICT diffusion and environmental sustainability is relatively new, less focused, and evolving, there is a great need of understanding how ICT development can be harnessed for a thriving economy that takes care of its environmental impact. We welcome submissions on the topics listed below: Exploring the role of ICT in green growth prospects; Analysing the role of ICT development for environmental sustainability; Conceptualizing and exploring the role of ICT in the clean energy transition; Analysing the strengths of alternative measures of ICT; Analysing the role of smart cities for sustainability concerns; ICT diffusion for designing, facilitating, and fostering sustainable economic performance; Internet of things; blockchain; big data; cloud computing; and smart technologies for sustainable development.

Analysis, Modelling, Optimization, and Numerical Techniques Gerard Olivar Tost, Olga Vasilieva, 2015-03-18. This book highlights recent compelling research results and trends in various aspects of contemporary mathematics, emphasizing applications to real-world situations. The chapters present exciting new findings and developments in situations where mathematical rigor is combined with common sense. A multi-disciplinary approach, both within each chapter and in the volume as a whole, leads to practical insights that may result in a more synthetic understanding of specific global issues as well as their possible solutions. The volume will be of interest not only to experts in mathematics but also to graduate students, scientists, and practitioners from other fields including physics, biology, geology, management, and medicine.

Granular, Fuzzy, and Soft Computing Tsau-Young Lin, Churn-Jung Liao, Janusz Kacprzyk, 2023-03-29. The first edition of the Encyclopedia of Complexity and Systems Science (ECSS) 2009 presented a comprehensive overview of granular computing. GrC broadly divided into several categories: Granular computing from rough set theory; Granular Computing in Database Theory; Granular Computing in Social Networks; Granular Computing and Fuzzy Set Theory; Grid/Cloud Computing as well as general issues in granular computing. In 2011, the formal

theory of GrC was established providing an adequate infrastructure to support revolutionary new approaches to computer data science including the challenges presented by so called big data For this volume of ECSS Second Edition many entries have been updated to capture these new developments together with new chapters on such topics as data clustering outliers in data mining qualitative fuzzy sets and information flow analysis for security applications Granulations can be seen as a natural and ancient methodology deeply rooted in the human mind Many daily things are routinely granulated into sub things The topography of earth is granulated into hills plateaus etc space and time are granulated into infinitesimal granules and a circle is granulated into polygons of infinitesimal sides Such granules led to the invention of calculus topology and non standard analysis Formalization of general granulation was difficult but as shown in this volume great progress has been made in combining discrete and continuous mathematics under one roof for a broad range of applications in data science
