Mathers,1985 *The Ganglionic Nervous System* James George Davey,1858 *The Peripheral Nervous System* John I. Hubbard,1974-09 The peripheral nervous system is usually defined as the cranial nerves spinal nerves and peripheral ganglia which lie outside the brain and spinal cord To describe the structure and function of this system in one book may have been possible last century Today only a judicious selection is possible It may be fairly claimed that the title of this book is not misleading for in keeping the text within bounds only accounts of olfaction vision audition and vestibular function have been omitted and as popularly understood these topics fall into the category of special senses This book contains a comprehensive treatment of the structure and function of peripheral nerves including axoplasmic flow and trophic functions junctional regions in the

autonomic and somatic divisions of the peripheral nervous system receptors in skin tongue and deeper tissues and the integrative role of ganglia It is thus a handbook of the peripheral nervous system as it is usually understood for teaching purposes The convenience of having this material inside one set of covers is already proven for my colleagues were borrowing parts of the text even while the book was in manuscript It is my belief that lecturers will find here the information they need while graduate students will be able to get a sound yet easily read account of results of research in their area
