Continue by explaining that "quad means four". Then, write quad means four below the quadrilateral.

Let's proceed with the next polygon. (While pointing at the pentagon, the teacher will ask the students.) What polygon is this? What can you tell me about it?

What is the prefix of pentagon? What does "pent" mean?

Continue for hexagon, heptagon, octagon, nonagon, and decagon. (Students should be able to identify the number of sides and possibly angles for each polygon.)

That's good class. I know that you'll find it easy to name or identify the different types of polygons. Now, can somebody give me the answer? What do you call a polygon having equal sides and equal angles?
