Duffy,Norbert Streitz,Shin'ichi Konomi,Heidi Krömker,2020-11-03 This book constitutes late breaking papers from the 22nd International Conference on Human Computer Interaction HCII 2020 which was held in July 2020 The conference was planned to take place in Copenhagen Denmark but had to change to a virtual conference mode due to the COVID 19 pandemic From a total of 6326 submissions a total of 1439 papers and 238 posters have been accepted for publication in the HCII 2020 proceedings before the conference took place In addition a total of 333 papers and 144 posters are included in the volumes of the proceedings published after the conference as Late Breaking Work papers and posters These contributions address the latest research and development efforts in the field and highlight the human aspects of design and use of computing systems The 42 late breaking papers presented in this volume were organized in topical sections as follows HCI in Automotive Interaction in Intelligent Environments and Digital Human Modeling and Ergonomics **Guideline for Building Services Design Inspired by the Cradle to Cradle Concept** Johannes Stiglmair,Karsten Jurkait,2020 The Cradle to Cradle C2C concept is a biomimetic approach that models human industry on nature s processes viewing materials as nutrients circulating in healthy and safe metabolisms It seeks to create systems that are not only efficient but also essentially waste free A growing number of building owners and developers are looking to implement it in their buildings be it to increase the productivity of their workforce or to provide a differentiator The C2C concept is reasonably covered in building construction however it is a rather uncharted area in building services making it difficult for MEP engineers to develop C2C inspired designs Arup set out to bridge this gap establishing how C2C inspired design would look like in the

different MEP disciplines and researching which systems products and materials are available in the market to meet the corresponding criteria The result is a comprehensive guideline that enables MEP engineers to develop a C2C inspired design It covers design criteria system selection system sizing design for deconstruction as well as material and product selection for the main MEP disciplines and sets out a number of criteria by which the aptness of a design for C2C can be measured

5th International Munich Chassis Symposium 2014 Peter E. Pfeffer,2014-07-18 The key drivers of innovation in the field of chassis systems are measures to improve vehicle dynamics and driving safety efforts to reduce fuel consumption and intelligent development methods In addition chassis development is focusing on enhancing ride comfort while also improving NVH characteristics At the same time modularization strategies concepts for the electrification of the powertrain and steps towards greater system connectivity are making increasingly complex demands on the chassis and its development Developers are being called upon to respond to these challenges with a variety of solutions <u>Evaluation of the Trevipark Automated Parking System</u> Highway Innovative Technology Evaluation Center (U.S.),2001-01-01 Prepared by the Civil Engineering Innovative Technology Evaluation Center a CERF innovation center serving the engineering and construction industries This report presents a CEITEC evaluation of the Trevipark automated parking system which was developed designed and supplied by TREVI S p A of Cesena Italy The evaluation is designed to determine the benefits and limitations of Trevipark for use as a technically viable automated vehicle parking system The evaluation focused on data collection site inspections and analyses The Trevipark system consists of a cylindrical enclosure with a central elevator system to park and store vehicles in a radial pattern This proprietary system is intended to provide safe and secure parking for lower cost smaller site and space requirements less retrieval time and other advantages *FPGA-Based Embedded System Developer's Guide* A.
