Formation of Male Gametophyte

Formation of Female Gametophyte

Gamete Formation

In sexual gametes, each cell is haploid (n). In a diploid organism, the gametes are produced by meiosis, which reduces the chromosome number by half. This process is called gametogenesis.

Male gametes (sperm) are produced in a different process than female gametes (egg). The process is called spermatogenesis. It involves the division of a single cell into four equal-sized cells, each containing half the genetic material.
