Trends in Obesity Research Peter R. Ling, 2005 Far from a sign of healthy prosperity and contentment, overweight and obesity are now considered high risk factors for a wide range of diseases including early death and disability, heart disease, diabetes, reproductive problems, cancer, breathing problems, and arthritis. Obesity, now at epidemic levels in many countries, is defined as an excessively high amount of body fat or adipose tissue in relation to lean body mass. The amount of body fat or adiposity includes concern for both the distribution of fat throughout the body and the size of the adipose tissue deposits. This book includes within its scope the causal connection of obesity to diseases as well as the prevention and treatment of obesity. Leading edge scientific research from throughout the world is presented in this book.

Nutrition in the Prevention and Treatment of Disease, Second Edition, focuses on the clinical applications and disease prevention of nutrition. This revised edition offers 18 completely new chapters and 50% overall material updated. Foundation chapters on nutrition research methodology and application clearly link the contributions of basic science to applied nutrition research and in turn to research-based patient care guidelines. Readers will learn to integrate basic principles and concepts across disciplines and areas of research and practice as well as how to apply this knowledge in new creative ways. Chapters on specific nutrients and health cover topics where data are just beginning to be identified, such as choline, antioxidants, nutrition and cognition, and eye disease. Established areas of chronic disease, obesity, diabetes, cardiovascular disease, gastrointestinal disease, and bone health are presented each in their own sections, which aim to demonstrate the inter-action of basic science, genetics, applied nutrition research, and research-based patient care guidelines. Given its unique focus and extensive coverage of clinical applications and disease prevention, this edition is organized for easy integration into advanced upper division or graduate nutrition curriculums.
