hot topic of hydraulic fracturing of wells or fracking for shale gas and its potential to disrupt groundwater systems to the application of highly technical modelling procedures to help solve complex real world problems It is a window on the preoccupations of modern hydrogeologists and an insight into the way in which hydrogeological techniques and methods are being holistically adapted to address problems in the real world This book is targeted at professional hydrogeologists sociologists experts in governance law and policy as well as ecologists and other professionals that nowadays all sit alongside groundwater understanding The book will also appeal to politicians resource managers regulators and others interested in sustainable water supply Index of Specifications and Standards , **Benchmarking in Services** Jaideep G.
