

Unit 3 Notes: Periodic Table Notes

- John Newlands proposed an organization system based on increasing atomic mass in 1864.
- He noticed that both the chemical and physical properties repeated every 8 elements and called this the Law of Octaves.
- In 1869 both Lothar Meyer and Dmitri Mendeleev showed a connection between atomic mass and an element's properties.
- Mendeleev published first, and is given credit for this.
- He also noticed a periodic pattern when elements were ordered by increasing Atomic Mass.
- By arranging elements in order of increasing atomic mass into columns, Mendeleev created the first Periodic Table.
- This table also predicted the existence and properties of undiscovered elements.
- After many new elements were discovered, it appeared that a number of elements were out of order based on their Properties.
- In 1913 Henry Mosley discovered that each element contains a unique number of Protons.
- By rearranging the elements based on Atomic Number, the problems with the Periodic Table were corrected.
- This new arrangement creates a periodic repetition of both physical and chemical properties known as the Periodic Law.

PERIODS

A simplified periodic table diagram where horizontal rows are highlighted with different colors to represent periods. The colors from top to bottom are: red (1st period), orange (2nd period), yellow (3rd period), green (4th period), blue (5th period), purple (6th period), and pink (7th period). The noble gases are shown in red, matching the first period.

Valence electrons across a period are in the same energy level

GROUPS

A simplified periodic table diagram where vertical columns are highlighted with different colors to represent groups. The colors from left to right are: red (Group 1), orange (Group 2), yellow (Group 13), green (Group 14), blue (Group 15), purple (Group 16), and pink (Group 17). The noble gases are shown in red, matching Group 1.
