Peripheral Neuropathy Neuropathic Pain Into The Light:

Peripheral Neuropathy & Neuropathic Pain Professor Gérard Said, 2014-09-01 Written by one of the world's leading experts Professor Gérard Said MD FRCP Dpt de Neurologie H pital de la Salp tri re Paris France Peripheral neuropathy is a common medical condition the diagnosis of which is often protracted or delayed It is not always easy to relate a neuropathy to a specific cause Many people do not receive a full diagnosis their neuropathy often being described as idiopathic or cryptogenic It is said that in Europe one of the most common causes is diabetes mellitus but there are also many other known potential causes The difficulty of diagnosis the limited number of treatment options a perceived lack of knowledge of the subject except in specialised clinics the number of which are limited all add to the difficulties which many neuropathy patients have to face Another additional problem for many patients is that once having received a full or even a partial diagnosis they are then often discharged back to their primary healthcare team who in many instances know little about this condition and how it may impact upon their patients lives In order to help bridge this gap in medical knowledge and to give healthcare providers a better understanding of this often distressing condition The Neuropathy Trust has commissioned a new book on this complex topic Written by one of the world's leading experts on neuropathy Professor Gérard Said it is a must read and also a handy reference book for doctors nurses physiotherapists chiropractors podiatrists and other health professionals As well as covering the anatomy of the nervous system and the basic pathological processes that may affect the peripheral nerves the book covers a whole range of neuropathic conditions These include for example Guillain Barr syndrome chronic inflammatory demyelinating polyneuropathy vasculitic neuropathies infectious neuropathies diabetic and other metabolic neuropathies hereditary neuropathies and neuropathies in patients with cancer Given the almost explosive increase in diabetes predicted over the coming years and the high incidence of HIV infections alone not to mention all the other possible causes of peripheral neuropathy no self respecting medical unit should be without a copy of this new book on their shelves The author Professor Gérard Said is based in the Department of Neurology at the prestigious H pital de la Salp tri re in Paris He has devoted a lifetime to the study of peripheral neuropathy and alongside other great neurological names added much to the world's ever growing store of knowledge on this complex but fascinating condition which affects so many individuals

Pain in Peripheral Nerve Diseases C. Sommer, H. Reichmann, 2001-10-12 The book takes a novel approach to the subject of pain in peripheral nerve disease by bringing together basic scientists and clinicians with an expertise in the field of neuropathic pain For the first time the description of clinically relevant diseases an up to date review of the pathophysiology of neuropathic pain and a comprehensive review of therapeutic options are combined in one book Furthermore the anatomy and pathology of peripheral nerve is outlined in the context of neuropathic pain Peripheral nerve disorders causing pain the mononeuropathies and polyneuropathies are described in detail including up to date summaries of pathogenesis and treatment Two chapters elucidate the pathophysiology of neuropathic pain one looking at causes in the

periphery and one covering central mechanisms Treatment options are outlined according to current knowledge from evidence based medicine and a state of the art treatment algorithm is given to facilitate practical management Clinicians neurologists and neurologists in training and basic scientists who are interested in pain will profit most from this book Painful neuropathies are frequently encountered in clinical practice and are difficult to manage The book helps to better understand and treat those conditions

Neuropathic Pain Jianguo Cheng,2019-01-21 Neuropathic pain is one of the most common most debilitating most costly and most difficult to treat categories of chronic pain conditions that are characterized by a lesion or disease of the somatosensory nervous system Managing neuropathic pain is challenging and requires skillful assessment and comprehensive and integrated treatment strategies that are mechanism guided evidence based and individualized However these critical and integral elements are very fragmented in the current literature The mechanistic understanding of neuropathic pain is typically found in basic research articles Clinical research evidence is presented in forms of clinical trials with emphasis on minimizing biases such as those from patient selection and assessment Individualized considerations for each patient are usually presented in case reports and problem based learning discussions This book overcomes these barriers and integrates all the critical elements around individual patient care into a coherent management strategy that is practical and applicable to daily clinical practice Rather than compiling what have been published in the literature this work emphasizes on identifying and highlighting the key points or findings that guide decision making in clinical practice It integrates the key points around a typical case scenario that not only represents the core of the diagnostic and therapeutic processes but also allows introduction and differentiation of painful conditions that bare similarities with the case in hand The overarching goal is to improve clinical outcomes through better understanding of the mechanisms more accurate diagnosis and wiser and more comprehensive treatment strategies
