Decision Making under Uncertainty in Financial Markets Jonas Eklom, 2018-09-13 This thesis addresses the topic of decision making under uncertainty with particular focus on financial markets The aim of this research is to support improved decisions in practice and related to this to advance our understanding of financial markets Stochastic optimization provides the tools to determine optimal decisions in uncertain environments and the optimality conditions of these models produce insights into how financial markets work To be more concrete a great deal of financial theory is based on optimality conditions derived from stochastic optimization models Therefore an important part of the development of financial theory is to study stochastic optimization models that step by step better capture the essence of reality This is the motivation behind the focus of this thesis which is to study methods that in relation to prevailing models that underlie financial theory allow additional real world complexities to be properly modeled The overall purpose of this thesis is to develop and evaluate stochastic optimization models that support improved decisions under uncertainty on financial markets The research into stochastic optimization in financial literature has traditionally focused on problem formulations that allow closed form or exact numerical solutions typically through the application of dynamic programming or optimal control The focus in this thesis is on two other optimization methods namely stochastic programming and approximate dynamic programming which open up opportunities to study new classes of financial problems More specifically these optimization methods allow additional and important aspects of many real world problems to be captured This thesis contributes with several insights that are relevant for both financial and stochastic optimization literature First we show that the modeling of several real

world aspects traditionally not considered in the literature are important components in a model which supports corporate hedging decisions Specifically we document the importance of modeling term premia a rich asset universe and transaction costs Secondly we provide two methodological contributions to the stochastic programming literature by i highlighting the challenges of realizing improved decisions through more stages in stochastic programming models and ii developing an importance sampling method that can be used to produce high solution quality with few scenarios Finally we design an approximate dynamic programming model that gives close to optimal solutions to the classic and thus far unsolved portfolio choice problem with constant relative risk aversion preferences and transaction costs given many risky assets and a large number of time periods

Bridging the Socio-technical Gap in Decision Support Systems Ana Respício, 2010 The socio technical gap is the great divide between social activities such as coordination which researchers and practitioners aim to support and those that are actually supported by technology As the social interaction takes place through technology it is changed and mediated by the technology This gap between the two dimensions is being challenged by new and innovative approaches such as cognitive ergonomics and Web 2 0

3 0 Research in Decision Making DM theory and Decision Support Systems DSS shows that this gap is due in part to technical limitations and in part to the complexity of the contexts where decision support must be provided Thus DSS researchers face important questions concerned with the encapsulation of complex social aspects of managerial decision making as well as with the representation of key human cognitive mechanisms such as intuition and insight within computational systems This book presents the latest innovations and advances in decision support theory and practice with a special focus on bridging the socio technical gap These achievements will be of interest to all those involved in decision making activities and research The book covers a wide range of topics including Understanding DM Design of DSS Web 2 0 Systems in Decision Support Business Intelligence and Data Warehousing Applications of Multi Criteria Decision Analysis Intelligent DM Context in DM Knowledge Management ERP Systems Decision Support for Policy Making Decision Making in Emergency Scenarios Decision Support in Commerce and Decision Support for Production Planning
