alloy design Although the relationships of properties of alloys to their composition and structure have long been a dominant theme in physical metallurgy it is only recently that metallurgists have turned their attention from the analytical post hoc study of the structure property relationship to the synthesis approach of alloy design As usual in the Battelle colloquia the first day started with a group of introductory lectures presented by leaders in the field each emphasizing his personal approach to the problem This provided a historical perspective for the colloquium These papers together with the banquet address of Professor J R Low Jr who was honored at the colloquium comprise the introductory section of these proceedings Alloy design is generally specific to a given application Thus the needs in alloy design in a number of important applications gas turbines electrical power generation equipment airframes pressure vessels and nuclear applications were presented in a group of papers An agenda discussion on Needs in Alloy Design followed These papers give the external constraints on alloy design applications and criteria for mechanical physical and chemical properties for which the alloys must be designed
