Before proceeding with the wireless router installation, be sure you read the contents of the product package, especially the *Reference Manual* in the CD and the attached literature on configuring PCs for networking.

Follow these instructions to set up your router.

Prepare to Install Your Wireless Router

- For Cable Modem Service: When you perform the wireless router setup steps, be sure to use the computer you used when you first set up your cable Internet connection.
- For DSL Service: You may need information such as the DSL login name and e-mail address and password in order to complete the wireless router setup.
- Observe the wireless placement and range guidelines in the *Reference Manual*.

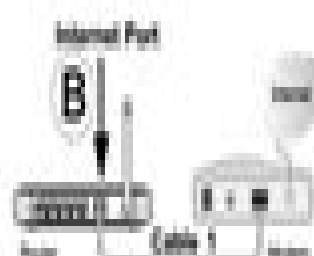

First, Connect the Wireless Router to the Internet

1. Connect the wireless router to the computer and the modem

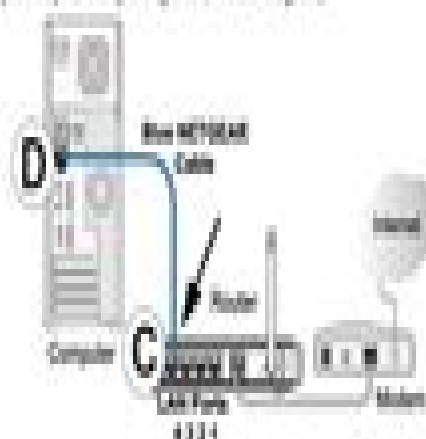

- Turn off your computer.
- Turn off the cable or DSL broadband modem.
- Locate the Ethernet cable (cable 1 in the diagram) that connects your modem and PC.
- Disconnect the cable at the computer end only, point A in the diagram.

- Securely insert the Ethernet cable from your modem (cable 1 in the diagram) into the Internet port of the wireless router as shown in point B in the diagram.

- Securely insert the other cable that came with your wireless router into a LAN port in the router such as LAN port 1 (point C in the diagram), and the other end into the Ethernet port of your computer (point D in the diagram).

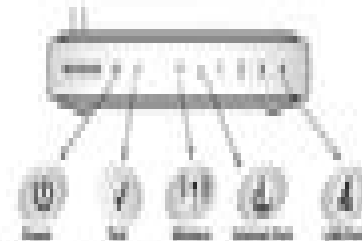

The network cables are connected and you are ready to restart your network.

2. Restart your network in the correct sequence

Warning: Failure to restart your network in the correct sequence could prevent you from connecting to the Internet.

- First, turn on the broadband modem and wait 1 minute.
- Next, plug in the power cord to your wireless router and wait 1 minute.
- Last, turn on your computer.

Note: For DSL customers, if ISP provided software logs you on to the Internet, do not run that software. You may need to go to the Internet Explorer Tools menu, Internet Options, Connections tab page where you can select "Show dial a connection."

- Check the wireless router status light to verify the following:
 - Power:** The power light should have solid green. If it does not have solid green, see the Troubleshooting Tips in this guide.
 - Net:** The net light blinks when the router is first turned on then goes off. If after 1 minute it is still on, see the Troubleshooting Tips in this guide.
 - Internet:** The Internet port light should be lit. If not, make sure the Ethernet cable is securely attached to the wireless router Internet port and the modem, and the modem is powered on.
 - Wireless:** The Wireless light should be lit. If the Wireless light is not lit, see the Troubleshooting Tips in this guide.
 - LAN:** A LAN light should be lit. Green indicates your computer is communicating at 100 Mbps, amber indicates 10 Mbps. If a LAN light is not lit, check that the Ethernet cable from the computer to the router is securely attached at both ends, and that the computer is turned on.

3. Use the Smart Wizard to configure the wireless router

- From the Ethernet connected PC you just set up, open a browser such as Internet Explorer or Netscape® Navigator.

In its factory default state, the wireless router will display the WNR814v1 Smart Wizard welcome page. Click OK to proceed.

Note: If you do not see this page, type <http://www.routerlogin.net> in the browser address bar and click Enter.

If you still cannot connect to the wireless router, verify your computer networking setup. It should be set to obtain both IP and DNS server addresses automatically, which is usually so. For help with this, please see the *Reference Manual* or attached literature in the CD.
