Systems Biology of Transcription Regulation Ekaterina Shelest, Edgar Wingender, Joerg Linde, 2016-09-09 Transcription regulation is a complex process that can be considered and investigated from different perspectives Traditionally and due to technical reasons including the evolution of our understanding of the underlying processes the main focus of the research was made on the regulation of expression through transcription factors TFs the proteins directly binding to DNA On the other hand intensive research is going on in the field of chromatin structure remodeling and its involvement in the regulation Whatever direction we select we can speak about several levels of regulation For instance concentrating on TFs we should consider multiple regulatory layers starting with signaling pathways and ending up with the TF binding sites in the promoters and other regulatory regions However it is obvious that the TF regulation also including the upstream processes represents a modest portion of all processes leading to gene expression For more comprehensive description of the gene regulation we need a systematic and holistic view which brings us to the importance of systems biology approaches Advances in methodology especially in high throughput methods result in an ever growing mass of data which in many cases is still waiting for appropriate consideration Moreover the accumulation of data is going faster than the development of algorithms for their systematic evaluation Data and methods integration is indispensable for the acquiring a systematic as well as a systemic view In addition to the huge amount of molecular or genetic components of a biological system the even larger number of their interactions constitutes the enormous complexity of processes occurring in a living cell organ organism In systems biology these interactions are represented by networks Transcriptional or more generally gene regulatory networks are being generated from experimental ChIPseq data by reverse engineering from transcriptomics data or from computational predictions of transcription factor TF target gene relations While transcriptional networks are now available for many biological systems mathematical models to simulate their dynamic behavior have been successfully developed for metabolic and to some extent for signaling networks but relatively rarely for gene regulatory networks Systems biology approaches provide new perspectives that raise new questions Some of them address methodological problems others arise from the newly obtained understanding of the data These open questions and problems are also a subject of this Research Topic

Deep Learning Applications for Cyber Security Mamoun Alazab, Mingjian Tang, 2019-08-14 Cybercrime remains a growing challenge in terms of security and privacy practices Working together deep learning and cyber security experts have recently made significant advances in the fields of intrusion detection malicious code analysis and forensic identification This book addresses questions of how deep learning methods can be used to advance cyber security objectives including detection modeling monitoring and analysis of as well as defense against various threats to sensitive data and security systems Filling an important gap between deep learning and cyber

security communities it discusses topics covering a wide range of modern and practical deep learning techniques frameworks and development tools to enable readers to engage with the cutting edge research across various aspects of cyber security The book focuses on mature and proven techniques and provides ample examples to help readers grasp the key points

Device-to-Device based Proximity Service Yufeng Wang, Athanasios V. Vasilakos, Qun Jin, Hongbo Zhu, 2017-07-12 D2D based proximity service is a very hot topic with great commercial potential from an application standpoint Unlike existing books which focus on D2D communications technologies this book fills a gap by summarizing and analyzing the latest applications and research results in academic industrial fields and standardization The authors present the architecture fundamental issues and applications in a D2D networking environment from both application and interdisciplinary points of view

Fundamentals of IoT Communication Technologies Rolando Herrero, 2021-06-23 This textbook explores all of the protocols and technologies essential to IoT communication mechanisms Geared towards an upper undergraduate or graduate level class the book is presented from a perspective of the standard layered architecture with special focus on protocol interaction and functionality The IoT protocols are presented and classified based on physical link network transport and session application layer functionality The author also lets readers understand the impact of the IoT mechanisms on network and device performance with special emphasis on power consumption and computational complexity Use cases provided throughout provide examples of IoT protocol stacks in action The book is based on the author's popular class Fundamentals of IoT at Northeastern University The book includes examples throughout and slides for classroom use Also included is a hands on section where the topics discussed as theoretical content are built as stacks in the context of an IoT network emulator so readers can experiment

Greening Criminology in the 21st Century Matthew Hall, Tanya Wyatt, Nigel South, Angus Nurse, Gary Potter, Jennifer Maher, 2016-11-25 In the 21st century environmental harm is an ever present reality of our globalised world Over the last 20 years criminologists working alongside a range of other disciplines from the social and physical sciences have made great strides in their understanding of how different institutions in society and criminal justice systems in particular respond or fail to respond to the harm imposed on ecosystems and their human and non human components Such research has crystallised into the rapidly evolving field of green criminology This pioneering volume with contributions from leading experts along with younger scholars represents the state of the art in criminologists pursuit of understanding in the environmental sphere while at the same time challenging academics lawmakers and policy developers to explore new directions in the study of environmental harm

Internet of Things (IoT) in 5G Mobile Technologies Constandinos X. Mavromoustakis, George Mastorakis, Jordi Mongay Batalla, 2016-04-20 This book reports on the latest advances in the modeling analysis and efficient management of information in Internet of Things IoT applications in the context of 5G access technologies It presents cutting edge applications made possible by the implementation of femtocell networks and millimeter wave communications solutions examining them from the perspective of the universally and constantly connected IoT Moreover it describes novel architectural approaches to the IoT and presents the new framework possibilities offered by 5G mobile networks including middleware requirements node centrality and the location of extensive functionalities at the edge

By providing researchers and professionals with a timely snapshot of emerging mobile communication systems and highlighting the main pitfalls and potential solutions the book fills an important gap in the literature and will foster the further developments of 5G hosting IoT devices
