

Poultry feed availability and nutrition in developing countries

Velmurugu Ravindran, *Monogastric Research Centre, Institute of Food, Nutrition and Human Health, Massey University, Palmerston North, New Zealand*

Worldwide, production of poultry meat and eggs has increased consistently over the years, and this trend is expected to continue. It is predicted that most increases in poultry production during the next two decades will occur in developing countries, where rapid economic growth, urbanization and higher household incomes will increase the demand for animal proteins. Several factors have contributed to the consistent growth in world poultry production, including: i) genetic progress in poultry strains for meat and egg production; ii) better understanding of the fundamentals of nutrition; and iii) disease control. For example, the age for a meat chicken to reach the market weight of 2 kg has steadily decreased from 63 days in 1976 to 35 days in 2009, and the efficiency of converting feed into poultry products also continues to improve. This growth in poultry production is having a profound effect on the demand for feed and raw materials. Feed is the most important input for poultry production in terms of cost, and the availability of low-priced, high-quality feeds is critical if poultry production is to remain competitive and continue to grow to meet the demand for animal protein.

PRODUCTION SYSTEMS AND FEEDING

Historically, the poultry sector has evolved through three phases: i) traditional systems, which include family poultry consisting of scavenging birds and backyard raising; ii) small-scale semi-commercial systems; and iii) large-scale commercial systems. Each of these systems is based on a unique set of technologies. They differ markedly in investment, type of birds used, husbandry level and inputs such as feeds. The feed resources, feeding and feed requirements required to raise poultry also vary widely, depending on the system used.

The traditional system is the most common type of poultry production in most developing countries. Possible feed resources for the local birds raised in this system include: i) household wastes; ii) materials from the environment (insects, worms, snails, greens, seeds, etc.); iii) crop residues, fodders and water plants; and iv) by-products from local small industrial units (cereal by-products, etc.). The survival and growth of extensive poultry systems are determined by the competition for feed resources in villages. This system works well where biomass is abundant, but in areas with scarce natural resources and low rainfall, the competition for natural resources with other animals can be extreme.

Between the two extremes of traditional and commercial production systems is the semi-commercial system, which is characterized by small to medium-sized flocks (50 to 500 birds) of local, crossbred or "improved" genotype stock, and the purchase of at least part of their feed from commercial compounders. Several feeding strategies may be used in this system: i) on-farm mixing

of complete rations, using purchased and locally available feed ingredients; ii) dilution of purchased commercial feeds with local ingredients; and iii) blending of a purchased concentrate mixture with local ingredients or whole grains.

The large-scale commercial system is the dominant production system in developed countries, and this sector has also recently expanded in many developing countries. Commercial systems are characterized by large vertically integrated production units and use high-producing modern strains of birds. In these systems, feed is the most important variable cost component, accounting for 65 to 70 percent of production costs. High productivity and efficiency depend on feeding nutritionally balanced feeds that are formulated to meet the birds' nutritional requirements.

POULTRY NEED TO BE FED WELL-BALANCED DIETS

Most poultry species are omnivores, which in nutritional terms means that they have a simple digestive system with non-functional caeca. Exceptions to this general rule include geese and ostriches, which have well-developed functional caeca. The digestive tract of poultry has more organs but is shorter than that of other domestic animals. The unique features of this digestive tract include the crop, which is a storage organ, and the gizzard, which is a grinding organ. In fast-growing meat chickens, it takes less than three hours for feed to pass from mouth to cloaca and for nutrients to be digested and absorbed. To compensate for the relatively short digestive tract and rapid digesta transit time, high-performing birds need easily digested, nutrient-dense diets. Nutrient balance is critical.

The rates of genetic change in growth and feed efficiency over the years have also changed the physiology of the birds. Nutrient requirements and nutritional management have therefore changed to satisfy the genetic potential of the new strains. The high genetic potential of current poultry strains can only be achieved with properly formulated feeds that are protein- and energy-dense. Poultry, especially growing birds, are unique among domestic animals in that any change in nutrition is reflected in bird performance almost immediately. This phenomenon has been successfully exploited by the commercial poultry industry to improve growth, carcass yield and egg production.

The term "poultry" encompasses a range of domesticated species, including chickens, turkeys, ducks, geese, game birds (such as quails and pheasants) and ratites (emus and ostriches). This overview does not discuss the nutrition of all these species, but focuses on chickens, which constitute more than 90 percent of the poultry market. However, the principles of nutritional management for chickens are generally applicable to other poultry species grown for meat and eggs.

Poultry Feed Availability and Nutrition in Developing Countries, 2010 Alternative Systems for Poultry Victoria Sandilands, Paul M. Hocking, 2012-01-01 Recent interest in how poultry are housed and managed in order to ensure profitability sustainability and good levels of animal welfare are challenging issues that commercial poultry keepers face particularly where legislation is bringing about legal requirements for housing This book compares and contrasts alternative housing with conventional and traditional systems for commercial poultry laying hens meat chickens turkeys waterfowl and gamebirds with regards to welfare disease health nutrition sustainability and genotype environment interaction It is suitable for researchers and students in poultry science **Achieving sustainable production of poultry meat Volume 1** Prof. Steven C. Ricke, 2016-12-31 Reviews latest research on zoonoses affecting poultry meat such as Salmonella and Campylobacter as well as methods for their control on the poultry farm and in the slaughterhouse Summarises advances in understanding and optimising poultry quality traits such as flavour colour tenderness shelf life and nutritional quality Discusses developments in measuring and reducing the environmental impact of poultry production Achieving sustainable production of poultry meat Volume 1 Steven C. Ricke, 2017-01-01 To meet growing demand the FAO has estimated that world poultry production needs to grow by 2 3% per year to 2030 Much of the increase in output already achieved has been as a result of improvements in commercial breeds combined with rearing in more intensive production systems However more intensive systems and complex supply chains have increased the risk of rapid transmission of animal diseases and zoonoses Consumer expectations of sensory and nutritional quality have never been higher At the same time consumers are more concerned about the environmental impact of poultry production as well as animal welfare Drawing on an international range of expertise this book reviews research on safety quality and sustainability issues in poultry production Part 1 discusses risks from pathogens detection and safety management on farms and in slaughterhouse operations Part 2 looks at ways of enhancing the flavour colour texture and nutritional quality of poultry meat Finally the book reviews the environmental impact of poultry production **Achieving sustainable production of poultry meat Volume 1** Safety quality and sustainability will be a standard reference for poultry and food scientists in universities government and other research centres and companies involved in poultry production It is accompanied by two further volumes which review poultry breeding nutrition health and welfare *Proceedings of the 6th International Conference on Combinatorics, Graph Theory, and Network Topology (ICCGANT 2022)* Dafik, 2023-04-26 This is an open access book It is with great pleasure and honor to announce The 6th International Conference of Combinatorics Graph Theory and Network Topology which will be held from 15th 16th November 2022 in the University of Jember East Java Indonesia It is the fifth international conference organized by CGANT It is the sixth international conference organized by CGANT Research Group University of Jember in cooperation with Indonesian Combinatorics Society INACOBMS The conference is held to welcome participants from many

Cassava Viduranga Waisundara,2018-01-17 Cassava is a staple food for many nations owing to its resilience for growth under various climatic conditions It is a good source of carbohydrates and is the third largest source of food carbohydrates in the tropics after rice and maize This book focuses on the morphological traits and nutritive properties of cassava and its production processes postharvest techniques and diseases that affect the growth of the crop Given its extensive usage and market value it is one of the agricultural produces for which many biotechnological interventions have been applied for ascertaining food security It is hoped that readers will gain knowledge on cassava as well as use some of the techniques mentioned herein for improvement of the production of the crop

Advances in Poultry Nutrition Research Amlan Kumar Patra,2021-07-07 Due to the wide acceptance of poultry meat and eggs poultry farming is the fastest growing global livestock industry Nutrition plays a vital role in economic production and the maintenance of proper poultry health Therefore there is a great need to update balanced nutrient requirements for new breeds utilize alternative feed resources evaluate newer feed additives to optimize production while excluding antimicrobial feed additives and maintain overall health The first section of this book contains six chapters that discuss the utilization of unconventional feeds nanominerals to reduce mineral proportions in diets and water intake affected by environmental temperature The second section contains six chapters that describe proper nutritional management to improve gut health and immunity the prevention of common diseases and the amelioration of heat stress in poultry

Insects as alternative sources of protein for food and feed

Adriana Casillas,2025-02-04 Reviews the nutritional benefits applications and challenges of using protein from black soldier flies and yellow mealworms in poultry pig and fish feed Considers recent advances in the development of mass breeding rearing techniques for the major insect species used as food or feed Explores some of the key issues currently facing the sector such as the need to ensure product safety the development of effective extraction techniques and consumer attitudes towards eating protein derived from insects

Gut Health: The New Paradigm in Food Animal Production Ryan J. Arsenault,Michael H. Kogut,2016-11-02 Gut health and specifically the gut microbiome host interaction is currently a major research topic across the life sciences In the case of animal sciences research into animal production and health the gut has been a continuous area of interest Production parameters such as growth and feed efficiency are entirely dependent on optimum gut health In addition the gut is a major immune organ and one of the first lines of defense in animal disease Recent

changes in animal production management and feed regulations both regulatory and consumer driven have placed added emphasis on finding ways to optimize gut health in novel and effective ways In this volume we bring together original research and review articles covering three major categories of gut health and animal production the gut microbiome mucosal immunology and feed based interventions Included within these categories is a broad range of scientific expertise and experimental approaches that span food animal production Our goal in bringing together the articles on this research topic is to survey the current knowledge on gut health in animal production The following 15 articles include knowledge and perspectives from researchers from multiple countries and research perspectives all with the central goal of improving animal health and production
