It explores the complex intersections that influence childlessness over the life course. **How to Use Two (2) Computational Strategies to Solve Simple System Identification Problems** Rolfe A. Julia Affolderbach, Christian Schulz, 2018-05-15. This volume analyzes sustainability related innovations in the building sector and discusses how regional contexts articulate transition trajectories toward green building. It presents biographies of drivers and processes of green building innovation in four case studies: Brisbane AUS, Freiburg GER, Luxembourg LU and Vancouver CA. Two of them are relatively well known for their initiatives to mitigate climate change particularly in the building sector, whereas the other two have only recently become more active in promoting green building. The volume places emphasis on development paths, learning processes and innovations. The focus of the case studies is not restricted to purely technological aspects but also integrates regulatory, procedural, institutional and other processes and routines and their influence on the variations of the building sector. The diversity of the selected case studies offers the reader the opportunity to gain a thorough understanding of how sustainability developments have unfolded in different city regions. Case study specific catalogues of transition paths provide insights to inform policy debates and planning processes. The catalogues identify crucial innovations, technological, regulatory, etc. and explain the factors and circumstances that have led to their success and broader acceptance in Freiburg, Vancouver, Luxembourg and Brisbane. With the help of a number of micro case studies within each of the four city regions, the case studies also offer ground for comparison and identification of differences. The book represents the outcome of the GreenRegio project, which stands for Green building in regional strategies for sustainability, multi actor governance and innovative building technologies in Europe, Australia and Canada. GreenRegio was a 3 year CORE INTER research project funded by the National Research Fund Luxembourg (FNR) and the German Research Foundation (DFG).
