Policy Instruments For Environmental And Natural Resource Management:

Policy Instruments for Environmental and Natural Resource Management Thomas Sterner, Jessica Coria, 2013-10-30

Thomas Sterner's book is an attempt to encourage more widespread and careful use of economic policy instruments. The book compares the accumulated experiences of the use of economic policy instruments in the U.S. and Europe as well as in rich and poor countries in Asia, Africa, and Latin America. Ambitious in scope, it discusses the design of instruments that can be employed in any country in a wide range of contexts, including transportation, industrial pollution, water pricing, waste, fisheries, forests, and agriculture. While deeply rooted in economics, *Policy Instruments for Environmental and Natural Resource Management* is informed by political, legal, ecological, and psychological research. The new edition enhances what has already been widely hailed as a highly innovative work. The book includes greatly expanded coverage of climate change, covering aspects related to policy design, international equity, and discounting, voluntary carbon markets, permit trading in the United States, and the Clean Development Mechanism. Focusing ever more on leading ideas in both theory and policy, the new edition brings experimental economics into the main of its discussions. It features expanded coverage of the monitoring and enforcement of environmental policy, technological change, the choice of policy instruments under imperfect competition, and subjects such as corporate social responsibility, bio-fuels, payments for ecosystem services, and REDD.

Policy Instruments for Environmental and Natural Resource Management Thomas Sterner, 2003. *Policy Instruments for Environmental and Natural Resource Management* uses economic, political, legal, ecological, and psychological perspectives to encourage more widespread and careful use of economic policy instruments in a wide range of contexts.

Policy Instruments for Environmental and Natural Resource Management Thomas Sterner, 2010-09-30. As Thomas Sterner points out, the economic toolkit for dealing with environmental problems has become formidable. It includes taxes, charges, permits, deposit-refund systems, labeling, and other information disclosure mechanisms. Though not all these devices are widely used, empirical application has started within some sectors, and we are beginning to see the first systematic efforts at an advanced policy design that takes due account of market-based incentives. Sterner's book encourages more widespread and careful use of economic policy instruments. Intended primarily for application in developing and transitional countries, the book compares the accumulated experiences of the use of economic policy instruments in the U.S. and Europe as well as in select rich and poor countries in Asia, Africa, and Latin America. Ambitious in scope, the book discusses the design of instruments that can be employed in a wide range of contexts, including transportation, industrial pollution, water pricing, waste, fisheries, forests, and agriculture. *Policy Instruments for Environmental and Natural Resource Management* is deeply rooted in economics but also informed by perspectives drawn from political, legal, ecological, and psychological research. Sterner notes that, in addition to meeting requirements for efficiency, the selection and design of policy instruments must satisfy criteria involving equity and political acceptability. He is careful to distinguish between the well-designed plans of policymakers and the resulting behavior.

Climate Change and the Law Erkki J. Hollo,Kati Kulovesi,Michael Mehling,2012-12-04 Climate Change and the Law is the first scholarly effort to systematically address doctrinal issues related to climate law as an emergent legal discipline It assembles some of the most recognized experts in the field to identify relevant trends and common themes from a variety of geographic and professional perspectives In a remarkably short time span climate change has become deeply embedded in important areas of the law As a global challenge calling for collective action climate change has elicited substantial

rulemaking at the international plane percolating through the broader legal system to the regional national and local levels More than other areas of law the normative and practical framework dedicated to climate change has embraced new instruments and softened traditional boundaries between formal and informal public and private substantive and procedural so ubiquitous is the reach of relevant rules nowadays that scholars routinely devote attention to the intersection of climate change and more established fields of legal study such as international trade law Climate Change and the Law explores the rich diversity of international regional national sub national and transnational legal responses to climate change Is climate law emerging as a new legal discipline If so what shared objectives and concepts define it How does climate law relate to other areas of law Such questions lie at the heart of this new book whose thirty chapters cover doctrinal questions as well as a range of thematic and regional case studies As Christiana Figueres Executive Secretary of the United Nations Framework Convention on Climate Change UNFCCC states in her preface these chapters collectively provide a review of the emergence of a new discipline its core principles and legal techniques and its relationship and potential interaction with other disciplines

The Economics of Climate Change in China Fan Gang, Nicholas Stern, Ottmar Edenhofer, Xu Shanda, Klas Eklund, Frank Ackerman, Lailai Li, Karl Hallding, 2013-09-13 China faces many modernization challenges but perhaps none is more pressing than that posed by climate change China must find a new economic growth model that is simultaneously environmentally sustainable can free it from its dependency on fossil fuels and lift living standards for the majority of its population But what does such a model look like And how can China best make the transition from its present macro economic structure to a low carbon future This ground breaking economic study led by the Stockholm Environment Institute and the Chinese Economists 50 Forum brings together leading international thinkers in economics climate change and development to tackle some of the most challenging issues relating to China's low carbon development This study maps out a deep carbon reduction scenario and analyzes economic policies that shift carbon use and shows how China can take strong and decisive action to make deep reductions in carbon emission over the next forty years while maintaining high economic growth and minimizing adverse effects of a low carbon transition Moreover these reductions can be achieved within the finite global carbon budget for greenhouse gas emissions as determined by the hard constraints of climate science The authors make the compelling case that a transition to a low carbon economy is an essential part of China's development and modernization Such a transformation would also present opportunities for China to improve its energy security and move its economy higher up the international value chain They argue that even in these difficult economic times climate change action may present more opportunities than costs Such a transformation for China and the rest of the world will not be easy But it is possible necessary and worthwhile to pursue Tackling Long-Term Global Energy Problems Daniel Spreng, Thomas Flüeler, David L. Goldblatt, Jürg Minsch, 2012-01-03 This book makes a case for a multidisciplinary and transdisciplinary approach to energy research one that brings more of the social sciences to bear Featuring eight studies from across the spectrum of the social

sciences each applying multiple disciplines to one or more energy related problems the book demonstrates the strong analytical and policy making potential of such a broadened perspective Case studies include energy transitions of households in developing countries the curse of oil politics and visions for renewables economics and ethics in emissions trading and carbon capture and storage *Smart Mixes for Transboundary Environmental Harm* Judith van Erp, Michael Faure, André Nollkaemper, Niels Philipsen, 2019-03-28 Analyzes how combinations of instruments at different levels of government or smart mixes can effectively regulate transboundary environmental harm
