The Lived Experience of Climate Change Dina Abbott, Gordon Wilson, 2015-04-22 This book explores the idea that daily lived experiences of climate change are a crucial missing link in our knowledge that contrasts with scientific understandings of this global problem It argues that both kinds of knowledge are limiting the sciences by their disciplines and lived experiences by the boundaries of everyday lives Therefore each group needs to engage the other in order to enrich and expand understanding of climate change and what to do about it Complemented by a rich collection of examples and case studies this book proposes a novel way of generating and analysing knowledge about climate change and how it may be used The reader is introduced to new insights where the book Provides a framework that explains the variety of simultaneous co existing and often contradictory perspectives on climate change Reclaims everyday experiential knowledge as crucial for meeting global challenges such as climate change Overcomes the science citizen dichotomy and leads to new ways of examining public engagement with science Scientists are also human beings with lived experiences that filter their scientific findings into knowledge and actions Develops a public action theory of knowledge as a tool for exploring how decisions on climate policy and intervention are reached and enacted While scientists physical and social seek to explain climate change and its impacts millions of people throughout the world experience it personally in their daily lives The experience might be bad as during extreme weather engender hostility when governments attempt mitigation and sometimes it is benign This book seeks to understand the complex often contradictory knowledge dynamics that inform the climate change debate and is written clearly for a broad audience including lecturers students practitioners and activists indeed anyone who wishes to gain further insight into this far reaching issue

Climate Change Action and the Responsibility to Protect Ben L. Parr, 2023-11-29 This book brings together two important fields in the study of international politics and policy climate change adaptation and mitigation climate action and the Responsibility to Protect R2P Both have attracted strong scholarly attention in each of their respective research silos but there is yet to be a strong research push that explores

the relationship between the two Filling this gap Ben L Parr argues that the climate action and the R2P agendas share a common goal to protect vulnerable human populations from large scale harm To substantiate this argument Parr reveals where the historical conceptual and operational parallels exist between the two agendas and where and when researchers and practitioners from both camps might work together in practice to achieve their common goal in the challenging years ahead Notably the book builds on recent efforts by Western governments in the UK US and EU to integrate climate action policies into conflict prevention and response policies To achieve this the volume situates a variety of climate action policies alongside the 46 policy options found in the R2P operational framework commonly known as the R2P toolbox across its prevention reaction and rebuilding phases Climate Change Action and the Responsibility to Protect will be of significant interest to policy orientated students and scholars those working at the academic policy interface in the NGO community as well as those working in government and international organisations

Towards an embodied science of intersubjectivity: Widening the scope of social understanding research Ezequiel Di

Paolo,Hanne De Jaegher,2015-06-16 An important amount of research effort in psychology and neuroscience over the past decades has focused on the problem of social cognition This problem is understood as how we figure out other minds relying only on indirect manifestations of other people's intentional states which are assumed to be hidden private and internal Research on this question has mostly investigated how individual cognitive mechanisms achieve this task A shift in the internalist assumptions regarding intentional states has expanded the research focus with hypotheses that explore the role of interactive phenomena and interpersonal histories and their implications for understanding individual cognitive processes This interactive expansion of the conceptual and methodological toolkit for investigating social cognition we now propose can be followed by an expansion into wider and deeply related research questions beyond but including that of social cognition narrowly construed Our social lives are populated by different kinds of cognitive and affective phenomena that are related to but not exhausted by the question of how we figure out other minds These phenomena include acting and perceiving together verbal and non verbal engagement experiences of disconnection management of relations in a group joint meaning making intimacy trust conflict negotiation asymmetric relations material mediation of social interaction collective action contextual engagement with socio cultural norms structures and roles etc These phenomena are often characterized by a strong participation by the cognitive agent in contrast with the spectatorial stance typical of social cognition research We use the

broader notion of embodied intersubjectivity to refer to this wider set of phenomena This Research Topic aims to investigate relations between these different issues to help lay strong foundations for a science of intersubjectivity the social mind writ large To contribute to this goal we encouraged contributions in psychology neuroscience psychopathology philosophy and cognitive science that address this wider scope of intersubjectivity by extending the range of explanatory factors from purely individual to interactive from observational to participatory
