and to operate in an efficient way In printing companies often four component mixtures of ethanol ethyl acetate isopropyl acetate and water arise as waste A separation scheme of multicomponent azeotropic distillation is developed and successfully used for a highly nonideal quaternary mixture The composition of the mixture in mass percent is ethanol 30% water 20% ethyl acetate 25% and isopropyl acetate with 20% The rest of the mixture 5% consists of n propane isopropane cyclohexane and etoxypropane For the further investigation just the guaternary mixture is examined Generally every component should be recovered as pure as possible from the mixture In the mixture namely five binary and two ternary azeotropes are formed by the components Based on the synthesis procedure proposed by Rev et al and Mizsey et al a new separation technology is developed followed up the vapor liquid liquid equilibrium behavior of the mixture They have recommended a general framework for designing feasible schemes of multicomponent azeotropic distillation. This procedure recommends to study in detail the vapor liquid liquid equilibrium data to explore immiscibility regions azeotropic points and separatrices for ternary and quaternary regions On the behalf of the VLLE data the set of feasible separation structures is explored This procedure is followed and a new separation structure is developed and tested experimentally First the quaternary mixture is separated into two ternary mixtures by distillation The two ternary mixtures containing ethyl acetate ethanol water and isopropyl acetate ethanol water respectively Due to the analogous behavior of the two ternary mixtures similar separation cycles can Proceedings of the 1st Annual Gas Processing Symposium Hassan E. Alfadala, G.V. Rex be designed The two Reklaitis, Mahmoud M. El-Halwagi, 2008-11-26 As the cleanest source of fossil energy with the most advantageous CO2 footprint natural gas continues to increase its share in the global energy market This book provides state of the art contributions in the area of gas processing Special emphasis is given to Liquified Natural Gas LNG the book also covers the following gas processing applications in parallel sessions Natural Gas processing and treatment Gas To Power and water Gas To Liquid GTL Gas To Petrochemicals including olefins ammonia and methanol Provides a state of the art review of gas processing technologies Covers design operating tools and methodologies Includes case studies and practical applications
