Communicating Climate Science - HC 254 Great Britain. Parliament. House of Commons. Select Committee on Science and Technology, Great Britain: Parliament: House of Commons: Science and Technology Committee, Andrew Miller, 2014-04-02 The Government is failing to clearly and effectively communicate climate science to the public There is little evidence of co ordination amongst Government government agencies and public bodies on communicating climate science despite various policies at national and regional level to mitigate and adapt to

climate change The mandate to act on climate can only be maintained if the electorate are convinced that the Government is acting on the basis of strong scientific evidence Ministers therefore need to do more to demonstrate that is the case and consistently reflect the Government approach in all their communications especially with the media The report also criticises the BBC for its reporting on the issue It points out that BBC News teams continue to make mistakes in their coverage of climate science by giving opinions and scientific fact the same weight The BBC is called to develop clear editorial guidelines for all commentators and presenters on the facts of climate that should be used to challenge statements from either side of the climate policy debate that stray too far from the scientific facts It is important that climate science is presented separately from any subsequent policy response Government should work with the learned societies and national academies to develop a source of information on climate science that is discrete from policy delivery comprehensible to the general public and responsive to both current developments and uncertainties in the science

Rank Hypocrisies Derek Sayer,2014-12-03 In crystalline text steeped in cold rage Sayer takes aim at the REF's central claim that it is a legitimate process of expert peer review He critiques university and national level REF processes against actual practices of scholarly review as found in academic journals university presses and North American tenure procedures His analysis is damning If the REF fails as scholarly review how can academics and universities continue to participate And how can government use its rankings as a basis for public policy Tarak Barkawi London School of Economics Sayer makes a compelling argument that the Research Excellence Framework is not only expensive and divisive but is also deeply flawed as an evaluation exercise Rank Hypocrisies is a rigorous and scholarly evaluation of the REF yet written in a lively and engaging style that makes it highly readable Dorothy Bishop University of Oxford Few decisions are as consequential for the funding and reputation of Britain's universities as those of REF panels Not only do REF rankings determine the levels of research funding universities receive from the state They equally affect institutions ability to attract external grants top flight faculty and graduate students Whatever benefit the UK's periodic research assessment exercises may have brought to research productivity the REF has been widely criticized for its enormous costs in taxpayers money and academics time its discouragement of innovative and especially interdisciplinary research and its negative effects on collegiality and staff morale Derek Sayer extends these arguments notably through his discussion of the questionable staff selection processes used in REF2014 within his own university Where Rank Hypocrisies goes beyond previous critiques is in its open challenge to the REF's claim to provide expert review of the outputs the very heart of its legitimacy Examining the composition and operation of REF disciplinary subpanels in forensic detail Sayer paints a picture in which overburdened assessors assign vaguely defined grades in fields that are frequently not their own while ignoring all external indicators of the academic influence of the publications they are appraising and then shred all records of their deliberations Judged against international norms of peer review the REF is an elaborate charade and an insult to the core values of the academy

The Solar Activity Cycle André Balogh, Hugh Hudson, Kristóf Petrovay, Rudolf Steiger, 2015-04-16 A collection of papers edited by four experts in the field this book sets out to describe the way solar activity is manifested in observations of the solar interior the photosphere the chromosphere the corona and the heliosphere The 11 year solar activity cycle more generally known as the sunspot cycle is a fundamental property of the Sun This phenomenon is the generation and evolution of magnetic fields in the Sun's convection zone the photosphere It is only by the careful enumeration and description of the phenomena and their variations that one can clarify their interdependences The sunspot cycle has been tracked back about four centuries and it has been recognized that to make this data set a really useful tool in understanding how the activity cycle works and how it can be predicted a very careful and detailed effort is needed to generate sunspot numbers This book deals with this topic together with several others that present related phenomena that all indicate the physical processes that take place in the Sun and its exterior environment The reviews in the book also present the latest theoretical and modelling studies that attempt to explain the activity cycle It remains true as has been shown in the unexpected characteristics of the first two solar cycles in the 21st century that predictability remains a serious challenge Nevertheless the highly expert and detailed reviews in this book using the very best solar observations from both ground and space based telescopes provide the best possible report on what is known and what is yet to be discovered Originally published in Space Science Reviews Vol 186 Issues 1-4 2014 [Access to Scientific Research](#) David J.
