Seakeeping Ship Behaviour In Rough Weather:

Seakeeping A. R. J. M. Lloyd, 1989 Seakeeping A. R. Lloyd, 1989-01-01 An examination of all aspects of the behaviour of ships in rough weather designed as a reference work for those involved in ship building and the design of seagoing vessels The text will also be of interest to sailors and engineers concerned with the action of waves and the sea Parametric Resonance in Dynamical Systems Thor I. Fossen, Henk Nijmeijer, 2011-12-14 Parametric Resonance in Dynamical Systems discusses the phenomenon of parametric resonance and its occurrence in mechanical systems vehicles motorcycles aircraft and marine craft along micro electro mechanical systems The contributors provides an introduction to the root causes of this phenomenon and its mathematical equivalent the Mathieu Hill equation Also included is a discussion of how parametric resonance occurs on ships and offshore systems and its frequency in mechanical and electrical systems This volume is ideal for researchers and mechanical engineers working in application fields such as MEMS maritime aircraft and ground vehicle engineering **Ship Resistance and Propulsion** Anthony F. Molland, Stephen R. Turnock, Dominic A. Hudson, 2017-08-17 This updated edition provides a modern scientific approach to evaluating ship resistance and propulsion for a range of ship types *Introduction to Naval Architecture* E. C. Tupper, 2013-01-09 Written by an award winning naval architecture author and former vice president of the Royal Institution of Naval Architects RINA the fifth edition of Introduction to Naval Architecture has been fully updated to take in advances in the field and is ideal both for those approaching the subject for the first time and those looking to update or refresh their knowledge on areas outside of their direct expertise This book provides a broad appreciation of the science and art of naval architecture explaining the subject in physical rather than in mathematical terms While covering basic principles such as hull geometry propulsion and stability the book also addresses contemporary topics such as computer aided design and computer aided manufacture CAD CAM The new edition reflects the continuing developments in technology changes in international regulations and recent research Knowledge of the fundamentals of naval architecture is essential not only for newcomers to the field but also the wealth of non naval architects working in the marine area including marine engineers marine surveyors and ship crews This book provides the most well known and trusted introduction to the topic offering a clear and concise take on the basics of this broad field Praise for previous edition a clear and concise introduction to the subject giving a good grasp of the basics of naval architecture Maritime Journal my go to book for understanding the general principles of naval architecture The book is well written and easy to understand Amazon com reviewer Provides a perfect introduction to naval architecture for newcomers to the field and a compact overview for related marine professionals needing a working knowledge of the area Updated to cover key developments including double hulled tankers and the increased use of computational methods and modeling in ship design Draws on the experience of renowned naval architecture author Eric Tupper to provide extensive scope and authoritative detail all in an accessible and approachable style **Proceedings of the 15th International Marine Design Conference**

Austin A. Kana,2024-08-22 The 15th International Marine Design Conference IMDC 2024 was organized by the Department of Maritime and Transport Technology Delft University of Technology and was hosted by the Netherlands Defence Materiel Organisation at the Marine Etablissement Amsterdam MEA The aim of the IMDC is to promote all aspects of marine design as an engineering discipline The focus of IMDC 2024 is on the key design challenges and opportunities in the maritime field with special emphasis on the following themes Ship design methodology issues such as design spiral systems engineering set based design design optimisation concurrent design modular design configuration based design or fuzzy design aspects Novel marine design concepts such as hull form design transport ships service vessels naval vessels yachts and cruise ships or specialized and complex vessels Offshore design methodology such as applications to offshore wind turbines semi submersibles floating fish farms or floating cities Influence of energy transition on maritime design including both zero emission and high power and energy systems Influence of unmanned and autonomous transition on maritime design Influence of digital transition on maritime design such as digital shadows and twins model based systems engineering AI ML and big data Influence of regulations on maritime design Maritime design education *Basic Ship Theory Volume 2* E. C. Tupper,KJ Rawson,2001-10-05 Rawson and Tupper s Basic Ship Theory first published in 1968 is widely known as the standard introductory text for naval architecture students as well as being a useful reference for the more experienced designer The fifth edition continues to provide a balance between theory and practice Volume 2 expands on the material in Volume 1 covering the dynamics behaviour of marine vehicles hydrodynamics manoeuvrability and seakeeping It concludes with some case studies of particular ship types and a discussion of maritime design Both volumes feature the importance of considering the environment in design Basic Ship Theory is an essential tool for undergraduates and national vocational students of naval architecture maritime studies ocean and offshore engineering and will be of great assistance to practising marine engineers and naval architects Brand new edition of the leading undergraduate textbook in Naval Architecture Provides a basis for more advanced theory Over 500 examples with answers **Ocean Engineering Mechanics** Michael E. McCormick,2010 This book is based on the author s experiences in engineering practice and in the classroom The introductory topics in wave mechanics and the presentation of such have their foundations in the courses taught at the U S Naval Academy The advanced topics have their origins in the postgraduate courses taught at the Johns Hopkins University **Practical Design of Ships and Other Floating Structures** You-Sheng Wu,Guo-Jun Zhou,Wei-Cheng Cui,2001-08-22 This proceedings contains the papers presented at The 8th International Symposium on Practical Design of Ships and Other Floating Structures held in China in September 2001 the first PRADS of the 21st Century The overall aim of PRADS symposia is to advance the design of ships and other floating structures as a professional discipline and science by exchanging knowledge and promoting discussion of relevant topics in the fields of naval architecture and marine and offshore engineering In line with the aim in welcoming the new era this Symposium is intended to increase international co operation

and give a momentum for the new development of design and production technology of ships and other floating structures for efficiency economy safety and environmental production The main themes of this Symposium are Design Synthesis Production Hydrodynamics Structures and Materials of Ships and Floating Systems Proposals for over 270 papers from 26 countries and regions within the themes were received for PRADS 2001 and about 170 papers were accepted for presentation at the symposium With the high quality of the proposed papers the Local Organising Committee had a difficult task to make a balanced selection and to control the total number of papers for fitting into the allocated time schedule approved by the Standing Committee of PRADS Volume I covers design synthesis production and part of hydrodynamics Volume II contains the rest of hydrodynamics and structures and materials *Ship Motion Control* Tristan Perez, 2006-03-30 engineers into a single volume whilst concentrating on two important research control design problems autopilots with rudder roll stabilization and fin and combined rudder fin stabilization He has been guided by some of the leading marine control academics in particular Mogens Blanke and Thor Fossen indeed Chapters 3 and 4 on kinematics and kinetics of ship motion are jointly authored with Professor Fossen There are some 240 cited references an invaluable resource for interested readers The volume is likely to appeal to a wide range of readers who will each be able to extract something different from the various parts of the monograph Part I has some four chapters on the modelling fundamentals including kinematics dynamics and actuators Part II is a very useful survey of the ship roll stabilization problem and how ship roll performance is measured and assessed This clearly motivates the human necessity for roll reduction and roll stabilization Parts III and IV move on to the control systems aspects of the various stabilization designs Valuable material here includes a study of system performance limitations as caused by the presence of non minimum phase characteristics and actuator saturation Chapter 10 has an interesting historical review of these marine control problems stretching back some thirty years into the 1970s
