Meeting the Challenges to Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited by leading experts these books are comprehensive and practical resources on the latest developments in the field The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

The Psychometrics of Standard Setting Mark D. Reckase, 2023-01-31 This book provides a unifying structure for the activities that fall under the process typically called standard setting on tests of proficiency Standard setting refers to the methodology used to identify performance standards on tests of proficiency The

results from standard setting studies are critical for supporting the use of many types of tests. The process is frequently applied to educational psychological licensure certification and other types of tests and examination systems. The literature on procedures for standard setting is extensive but the methodology for standard setting has evolved in a haphazard way over many decades without a unifying theory to support the evaluation of the methods and the validation of inferences made from the standards. This book provides a framework for going beyond specific standard setting methods to gain an understanding of the goals for the methods and how to evaluate whether the goals have been achieved. The unifying structure provided in this book considers policy that calls for the existence of performance standards, the relationship of proficiency test design to the policy and tasks assigned to subject matter experts to help them convert the policy to estimates of locations on the reporting score scale for the test. The book provides guidance on how to connect the psychometric aspects of the standard setting process to the intentions of policy makers as expressed in policy statements. Furthermore, the structure is used to support validity arguments for inferences made when using standards. Examples are provided to show how the unifying structure can be used to evaluate and improve standard setting methodology.

Optimising Management Practices to Secure Grassland Agroecosystems' Sustainability Zhou Li, Yuan Li, Bin Yao, Carmen Carmona, 2024-12-27. The world is currently experiencing increasing pressure on the environment with soil health and food security rising on the agenda. Conventional agricultural management practices have led to the systems being unable to maintain high productivity and quality under the original input level, worsening soil health and weakening the ecological function of agricultural soils, especially the ability to adapt to climate change. Grassland farming uses legumes as well as grasses in agriculture. Grasses and/or grass-legume mixtures are used as feed for livestock and to maintain the health of land resources. Integrating grassland agriculture into a farming system provides a number of important benefits to farmers and society. Benefits of grassland agriculture include reducing soil and water erosion, providing high quality feed for livestock, securing soil fertility and biodiversity, facilitating soil carbon sequestration, enhancing agroecosystem productivity, sustainability, stability and resistance.
