[Psychology and Mathematics Education](#) Gila Hanna,Laura Macchi,Karin Binder,Laura Martignon,Katharina Loibl,2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are

caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

Reconceptualising Maths and Science Teaching and Learning Stephen Dinham,Russell Tytler,David Hoxley,Deborah Corrigan,2017-11-01 How do we enable young people to imagine themselves as the next generation of STEM professionals How do we do this in a way that engages the desire to learn and explore In Australia there is increasing concern at the declining participation in advanced level school mathematics and physical sciences fewer students electing to study STEM programs at university and evidence of declining performance of Australian students on international comparative tests in mathematics and science This timely book highlights the need to reconceptualise Maths and Science Teacher Education Programs ReMSTEP in order to revitalise maths and science teaching approaches within primary and secondary schools Through a series of seven innovations such as offering maths and science specialisations within primary pre service teaching programs or creating opportunities to connect scientists and mathematicians with both pre service teachers and practitioners in developing activities for school contexts ReMSTEP recognises that teacher graduates are powerful change agents for making maths and science curricula more engaging challenging and relevant for primary and secondary students This substantively researched text based on ReMSTEP s extensive trialling and exhaustive consultation with researchers and practitioners alike enriches the debate on the educational relevance of maths and science and is a crucial reference for educational decision makers lecturers and pre service teachers and school leaders Part A examines the challenges around science and maths education Part B explores through case studies the seven ReMSTEP innovations around which the activities were organised Part C provides an overview of the impacts of the innovations and explores the implications of the findings
