mixture of regularity and irregularity A particular pattern seems to follow particular rules but these rules allow variations No two shells are identical The motionless patterns appear to be static and indeed they consist of calcified material However as will be shown in this book the underlying mechanism that generates this beauty is eminently dynamic It has much in common with other dynamic systems that generate patterns such as a wind sand system that forms large dunes or rain and erosion that form complex ramified river systems On other shells the underlying mechanism has much in common with waves such as those commonly observed in the spread of an epidemic A mollusc can enlarge its shell only at the shell margin In most cases only at this margin are new elements of the pigmentation pattern added Therefore the shell pattern preserves a record in time of a process that took place in a narrow zone at the growing edge A certain point on the shell represents a certain moment in its history Like a time machine one can go into the past or the future just by turning the shell back and forth Having this complete historical record opens the possibility of decoding the generic principles behind this beauty My interest in these patterns began with a dinner in an Italian restaurant
