Wilson, G.A. Houseman, K.J.W. McCaffrey, A.G. Doré, S.J.H. Buiter, 2019-11-11 Fifty years ago Tuzo Wilson published his paper asking Did the Atlantic close and then re open This led to the Wilson Cycle concept in which the repeated

opening and closing of ocean basins along old orogenic belts is a key process in the assembly and breakup of supercontinents. The Wilson Cycle underlies much of what we know about the geological evolution of the Earth and its lithosphere and will no doubt continue to be developed as we gain more understanding of the physical processes that control mantle convection, plate tectonics and as more data become available from currently less accessible regions. This volume includes both thematic and review papers covering various aspects of the Wilson Cycle concept. Thematic sections include 1 the Classic Wilson v Supercontinent Cycles 2 Mantle Dynamics in the Wilson Cycle 3 Tectonic Inheritance in the Lithosphere 4 Revisiting Tuzo's question on the Atlantic 5 Opening and Closing of Oceans and 6 Cratonic Basins and their place in the Wilson Cycle.

Living with Earth Travis Hudson,2016-09-17 For many students with no science background environmental geology may be one of the only science courses they ever take Living With Earth An Introduction to Environmental Geology is ideal for those students fostering a better understanding of how they interact with Earth and how their actions can affect Earth s environmental health The informal reader friendly presentation is organized around a few unifying perspectives how the various Earth systems interact with one another how Earth affects people creating hazards but also providing essential resources and how people affect Earth Greater emphasis is placed on environment and sustainability than on geology unlike other texts on the subject Essential scientific foundations are presented but the ultimate goal is to connect students proactively to their role as stakeholders in Earth s future

Prichard,1993 This volume celebrates Professor Ian Gass covering many of the subjects which most interested him especially processes operating in oceanic crust The introductory papers examine evolution of magmas from mantle melting to eruption A central section concerns ophiolite complexes Several papers focus on different aspects of the Troodos ophiolite complex in Cyprus In addition ophiolites are reviewed and examined A further section concentrates on tectonics and the genesis of magmas associated with collision and subduction This contrasts
