New Trends and Challenges in Optimization Theory Applied to Space Engineering Piermarco Cannarsa, Alessandra Celletti, Giorgio Fasano, Leonardo Mazzini, Mauro Pontani, Emmanuel Trélat, 2025-08-30 The book consists of the proceedings of the workshop New Trends and Challenges in Optimization Theory Applied to Space Engineering held in l Aquila Italy and organized by the Gran Sasso Science Institute GSSI on December 13 15 2023 The main purpose of the book is to provide an overview of the most important current topics concerning optimal control in space Optimal control theory is an exciting research area where both new theoretical approaches and application problems come into play The New Trends and Challenges in Optimization Theory Applied to Space Engineering conference brought together influential academic researchers and experts from industry and government to build bridges between their respective groups The topics of the conference panels are selected to include the most advanced areas of interest for space applications In line with the mission of the Gran Sasso Tech Foundation interdisciplinary dialogue is promoted between the sciences and different experts are encouraged to work together to identify new problems and generate new solutions Covering a wide range of space related topics and challenges this conference aims to lay the foundation for a long term collaboration between different groups of experts A broad overview of control theory applications in space is presented highlighting the most recent aspects both from a theoretical and practical point of view in particular on the following topics manifold dynamics trajectory design and related control aspects AI techniques in guidance control problems and space missions optimization techniques for constellations with applications to space operations multi stage control problems for launch and landing problems optimal control problems in the presence of uncertain parameters improved sufficient and necessary conditions in optimal control problems for space problems New methods specific mathematical models ad hoc algorithms and heuristics innovative mission scenarios and advances in classical control theory are presented

Property Rights in Outer Space Matthew Johnson, 2024-05-28 This book explores the role of private mining rights in the utopian imaginary of space colonisation It presents a transdisciplinary account of the new and evolving legislative frameworks that have been established in anticipation of commercial exploitation of the mineral resources of the off world frontier Written in an engaging style the book investigates a novel case study in the history of capitalism and the commons the emergence of a nascent space mining industry undergirded by a contentious legislative framework In 2015 the US passed laws that would recognise the claims of US corporations to own and sell space resources This unilateral act of pre-emptive law making would appear to contravene the terms of the UN Outer Space Treaty 1967 which declared that the exploration and use of outer space should be for the benefit of all mankind and not subject to national appropriation Using this central dynamic between privately held mining rights and outer space as a global commons Matthew Johnson constructs an historical sociology of space mining from the deep historical roots of common and private property to the contemporary networks of neoliberalism that have engaged with the commercialisation of space activity The

anticipatory expansion of private property claims beyond the Earth both resonates with and problematises the terrain of political history such as the tensions between states and markets public law and private power the commons and exclusive property The emerging cosmopolitics of off world private property mirrors and is often explicitly embedded within neoliberal geopolitics prompting urgent questions about how we can reaffirm principles of democracy and common heritage in the international laws of Earth and space This book is compelling reading for anyone interested in the social study of space law economics technology politics and property rights

Earth Under Fire Paul A. LaViolette, 2005-10-25 An investigation of the connection between ancient world catastrophe myths and modern scientific evidence of a galactic destruction cycle Provides scientific evidence of past Earth wide catastrophes and their galactic superwave origins Decodes the ancient message encrypted in the zodiac constellations and symbolism of the Sphinx Describes how explosions of our Galaxy's core pose a threat to humanity in the future Many ancient myths from around the world tell of catastrophic destruction by fire and flood These ubiquitous legends are so extreme that they are often dismissed as imaginative exaggerations In *Earth Under Fire* Paul LaViolette connects these myths to recent scientific findings in astronomy geology and archaeology to reconstruct the details of prehistoric global disasters and to explain how similar tragedies could recur in the near future Compelled by his decryption of an ancient warning hidden in zodiac constellation lore LaViolette worked with information from many scientific sources including astronomical observations polar ice core measurements and other geological data to confirm that our Galaxy's core exploded near the end of the last ice age This explosion unleashed a barrage of cosmic rays and enveloped the solar system in a dense nebula which led to periods of persistent darkness frigid cold severe solar storms searing heat and mountainous floods that plagued mankind for many generations Linking his scientific findings to details preserved in the myths and monuments of ancient civilizations he demonstrates how past civilizations accurately recorded the causes of these cataclysmic events knowledge of which may be crucial for the human race to survive the next catastrophic superwave cycle This information reveals the intelligence and ingenuity of our ancestors who when faced with extinction found the means to warn us that the apocalypse that destroyed them could occur once again

Worlds Without End Chris Impey, 2023-04-11 The science of finding habitable planets beyond our solar system and the prospects for establishing human civilization away from our ever less habitable planetary home Planet Earth it turns out may not be the best of all possible worlds and lately humanity has been carelessly depleting resources decimating species and degrading everything needed for life Meanwhile human ingenuity has opened up a vista of habitable worlds well beyond our wildest dreams of outposts on Mars *Worlds without End* is an expertly guided tour of this thrilling frontier in astronomy the search for planets with the potential to host life With the approachable style that has made him a leading interpreter of astronomy and space science Chris Impey conducts readers across the vast fast developing field of astrobiology surveying the dizzying advances carrying us ever closer to the discovery of life beyond Earth and the prospect of humans living on another planet Since the first exoplanet or planet

beyond our solar system was discovered in 1995 over 4 000 more have been pinpointed including hundreds of Earth like planets many of them habitable detected by the Kepler satellite With a view spanning astronomy planetary science geology chemistry and biology Impey provides a state of the art account of what s behind this accelerating progress what s next and what it might mean for humanity s future The existential threats that we face here on Earth lend urgency to this search raising the question Could space be our salvation From the definition of habitability to the changing shape of space exploration as it expands beyond the interests of government to the pursuits of private industry Worlds without End shows us the science on horizons near and far that may hold the answers *Perspectives on the Age of the Earth and Why They Matter* Francis Ö. Dudás,2020-02-13 Polls show almost half of US adults believe that Earth is only 10 000 years old whereas scientists consider our planet to be 4 56 billion years old Examining these conflicting views illuminates aspects of the perceived conflict between religion and science and helps us understand the battles between evolutionist and creationist advocates This book examines how we approach knowledge and how we look at certainty It disentangles the threads of the traditional knowledge we are taught from the knowledge we gain from our own investigation of truth It argues that nature the basis of science and scripture the basis of religion derive from a single source Because of their shared origins religious and scientific perspectives grounded in verifiable truths must be in harmony The book presents the science behind the reliability of isotopic dates and critiques young earth creationist attacks on isotopic studies Though the nature of time is a philosophical issue its measurement is a scientific venture that has affirmed that Earth is 4 56 billion years old The harmony of science and religion based on recognition of their single source is a prerequisite for the progress of humanity as a whole

Mondi senza fine Chris Impey,2024-04-17T00:00:00+02:00 Il pianeta Terra in un futuro non troppo lontano potrebbe non essere pi il migliore dei mondi possibili Le ragioni sono tristemente note l emergenza climatica le minacce biologiche e l esaurimento delle risorse primarie Tuttavia nello stesso tempo l ingegno umano ha spinto lo sguardo su mondi abitabili ben oltre i sogni pi sfrenati di avamposti su Marte Mondi senza fine una visita guidata a questa emozionante frontiera dell astronomia la ricerca di pianeti fuori dal nostro Sistema Solare e in grado di ospitare la vita Con lo stile divulgativo che lo ha reso uno dei principali interpreti dell astronomia e della scienza spaziale Chris Impey ci accompagna attraverso un campo affascinante ripercorrendo i vertiginosi progressi che stanno portando sempre pi vicini alla scoperta della vita oltre la Terra e alla prospettiva che l uomo possa vivere su un altro pianeta Con una visione che abbraccia astronomia scienza planetaria geologia chimica e biologia questo libro risponde all interrogativo fornendo un resoconto all avanguardia di ci che sta alla base del progresso accelerato in atto di quello che ci aspetta e di ci che potrebbe significare per il futuro e la salvezza dell umanit *Psychedelic Sociality: Pharmacological and Extrapharmacological Perspectives* Leor Roseman,Michael James Winkelman,Katrin H. Preller,Evgenia Fotiou,2022-08-25 **Fictioning Namibia as a Space of Desire** Renzo Baas,2019-02-25 Modern day Namibian history has largely been shaped by three major eras German colonial rule South

African apartheid occupation and the Liberation Struggle It was however not only military conquest that laid the cornerstone for the colony but also how the colony was imagined the dream of this colony As a tool of discursive worldmaking literature has played a major role in providing a framework in which to dream Namibia first from outside its borders and then from within In *Fictioning Namibia as a Space of Desire* Renzo Baas employs Henri Lefebvres city countryside dialectic and reworks it in order to uncover how fictional texts played an integral part in the violent acquisition of a foreign territory Through the production of myths around whiteness German and South African authors designed a literary space in which control destruction and the dehumanisation of African peoples are understood as a natural order one that is dictated by history and its linear continuation These European texts are offset by Namibias first novel by an African offering a counter narrative to the colonial invention that was German South West Africa *AUUGN*, 1998-11 **Yearbook on Space Policy 2017** Edward Burger, Giulia Bordacchini, 2019-02-12 The book describes the recent trends in space policy and the space sector overall While maintaining a global scope with a European perspective it links space policy with other policy areas highlights major events and provides insights on the latest data The Yearbook includes the proceedings of ESPI s 12th Autumn Conference which discussed the growing importance of Security in Outer Space and the stakes for civilian space programmes in the public and private sectors Bringing together satellite operators SMEs European and American institutions and think tanks the Autumn Conference served as platform for fresh insights on security in outer space and the potential of transatlantic relations to address its challenges The Yearbook also includes executive summaries of ESPI s work in 2017 as well as ESPI s 2017 Executive Briefs covering topics such as suborbital spaceflight super heavy lift launch vehicles collaboration with China and the delimitation of outer space All in all the book gives a detailed review of space policy developments worldwide contextualised with information about national level space industries and activity and broader political and economic conditions The readership is expected to include the staff of space agencies the space industry and the space law and policy research community
