Commonly Asked Questions in Physics Andrew Rex, 2018-09-18 In the 300 years since Newton s seminal work physics has explained many things that used to be mysterious Particularly in the last century physics has addressed a range of questions from the smallest fundamental particles to the large scale structure and history of the entire universe But there are always more questions Suitable for a wide audience Commonly Asked Questions in Physics covers a broad scope of subjects from classical physics that goes back to the age of Newton to new ideas just formulated in the twenty first century The book highlights the core areas of physics that predate the twentieth century including mechanics electromagnetism optics and thermodynamics It also focuses on modern physics covering quantum mechanics atomic and nuclear physics fundamental particles and relativity Each chapter explains the numbers and units used to measure things and some chapters include a Going Deeper feature that provides more mathematical details for readers who are up to the challenge The suggested readings at the end of each chapter range from classic textbooks to some of the best books written for the general public offering readers the option to study the topic in more depth Physics affects our lives nearly every day using cell phones taking x rays and much more Keeping the mathematics at a very basic level this accessible book addresses many physics questions frequently posed by physics students scientists in other fields and the wider public

Solutions to the Unsolved Physics Problems Balungi Francis, 2019-04-24 People have always wanted answers to the big questions Where did we come from How did the universe begin What is the meaning and design behind it all Is there anyone out there The creation accounts of the past now seem less relevant and credible They have been replaced by a variety of what can only be called superstitions ranging from New Age to Star Trek But real science can be far stranger than science fiction and much more satisfying I am a scientist And a scientist with a deep fascination with physics cosmology the universe and the future of

humanity I was brought up by my parents to have an unwavering curiosity and like my father to research and try to answer the many questions that science asks us I have spent my life travelling across the universe inside my mind Through theoretical physics I have sought to answer some of the great questions At one point I thought I would see the end of physics as we know it but now I think the wonder of discovery will continue long after I am gone We are close to some of these answers but we are not there yet The problem is most people believe that real science is too difficult and complicated for them to understand But I don't think this is the case To do research on the fundamental laws that govern the universe would require a commitment of time that most people don't have the world would soon grind to a halt if we all tried to do theoretical physics But most people can understand and appreciate the basic ideas if they are presented in a clear way with equations which I believe is possible and which is something I have enjoyed trying to do throughout my life It has been a glorious time to be alive and doing research in theoretical physics Our picture of the universe has changed a great deal in the last fifty years and I'm happy if I have made a contribution One of the great revelations of the space age has been the perspective it has given humanity on ourselves When we see the Earth from space we see ourselves as a whole We see the unity and not the divisions It is such a simple image with a compelling message one planet one human race I want to add my voice to those who demand why we must ask the big questions immediate action on the key challenges for our global community I hope that going forward even when I am no longer here people with power can show creativity courage and leadership Let them rise to the challenge of the sustainable development goals and act not out of self interest but out of common interest I am very aware of the preciousness of time Seize the moment Act now

[Answers to Questions About Origin Particles in Physics](#) Miroslav Halza,2019-05-29 Do energies produce objects or objects produce energies Albert Einstein set his career on revealing the secret mysticism It is Jewish mysticism written in the book Zohar Splendor or Radiance that interprets the biblical creation by slowing and extinguishing light In other words Zohar introduced mass energy equivalence matter is that light and relativity of time due to speed lost speed of that light has produced time Einstein just added mathematical formulas to those mystic theorems to be called scientific quantum theories Thus he has returned Physics back in the Dark Age that ruled before Newton the book Zohar written in the 2nd century On the contrary Halza applies just Newton style of physics onto particles existing on the smallest level Only motion of these particles may produce energy quantum of energy or energy in field Then it is the Newtonian physics of motion that proposes understanding of all existing particles and forces including dark energy and dark matter While materialistic explanations are going on in this publication all main questions about origin particles and origin forces including why does light have the constant speed and so on are answered

Physics, Martinus Cosmology and the Theory of Everything Leif Pettersson,2012-03-22 A completely New Understanding of Reality Presenting FET a new model that meets physicists criteria for what they term The Theory of Everything and provides answers to many unsolved mysteries of physics FET describes the qualitative vacuum

energies the Fundamental Energies in the zero point field underlying and constituting the entire physical world explaining dark matter dark energy particles mass Higgs field gravity space time and much more Leif Pettersson has succeeded in presenting this complex astounding material in a clear cut rational and comprehensive way The subject is highly topical and of great public interest it connects to the research at CERN and it also matches the presentation of science and popular science in today's media The book is richly illustrated in color Physicists have worked intensively for a long time to understand our physical world They have also been struggling to unify the four forces of nature gravity electromagnetism and the strong and weak nuclear forces into a Theory of Everything but so far without success In this book Leif Pettersson presents a groundbreaking and very exciting material with theories based on the intuitive knowledge contained in Martinus Cosmology These theories demonstrate a new model The Fundamental Energy Theory FET that without any contradiction unifies the four fundamental forces of nature and in fact gives us The Theory of Everything Hypotheses are presented that may explain the mechanisms behind Einsteins General and Special Theories of Relativity quantum physics with its hypothetical gravitons Higgs particles etc and the enigmatic dark matter dark energy and a lot more The Fundamental Energy Theory offers a logical coherent key to many of the unsolved mysteries of physics e.g. those being currently studied in the world's biggest research project so far the particle accelerator in CERN The book is made available by New Cosmic Paradigm NCP an independent organization representing and working with the branch of the intuitive knowledge contained in Martinus Cosmology that is building bridges to Science focusing on the great issues about Life Consciousness and Reality posed by humanity and science This branch is especially represented by Per Bruus Jensen former trainee and collaborator with Martinus Physics Martinus Cosmology and The Theory of Everything The Fundamental Energy Theory FET by Leif Pettersson is an important addition to this field More information at www.newcosmicparadigm.org Welcome

Myth Busting Physics Roger I. Parker II, 2020-11-09 When it comes to science the evidence should rule the day Roger I Parker II puts myths revolving around physics to the test in the third edition of Myth Busting Physics Get answers to questions such as Is time a fourth dimension Can quantum fluctuations in a vacuum exist Do photons have mass Is there anything outside the observable universe Can anything be colder than absolute zero Parker also examines why some physicists believe they can get something from nothing and how the Pauli Exclusion Principle provides a way to either prevent time travel or to make it very difficult Other topics include the Casimir Effect the large scale structure of our universe the relationship between thermal radiation light and the warping of space gravity why temperature fluctuations and not mass determine the fate of the universe and our concept of the universe Join the author as he takes a closer look at the universe to show what is true and what we've gotten all wrong

Exploring the Physics of the Unknown Universe Milo Wolff, 1990 Follow a trail of scientific clues and ideas from the Greeks to Newton Mach Clifford Einstein Dirac Feynman and beyond to modern galactic astronomy as Wolff conducts an investigation of the fundamental particles and their relationship to the structure of the universe

proposing an answer to the question Is there a unification theory of physics 46 illustrations Technotran Press **Notes for a New Physics and Cosmology** Giacinto Libertini, 2025-09-03 For the layman modern physics is like an immense and magnificent cathedral that is impressive in its complex and sophisticated architecture and amazing in size and richness of the workmanship Yet in this apparently almost complete building there is no answer to a series of fundamental and crucial questions while in any case these answers are indispensable and preliminary to any general theory It is essential to avoid confusion between appropriate and clarifying answers and false tautological answers or formulas that actually say nothing about the questions asked In this book the starting point is the interpretation given by Einstein's general relativity to explain the gravitational force not as an action at a distance but as an intrinsic effect of the spatial distortions caused by the masses This interpretation of Einstein is here extended to the explanation of any attractive or repulsive force as an effect for each force of the flattening of a specific dimension with positive or negative curvature The work offers without any forcing an explanation for most of the unsolved questions of physics the nature of a mass and of matter and antimatter the structure of an atom the origin of natural constants the quantization of phenomena etc It also offers a different interpretation of the structure of electrons and black holes In addition the existence of antimatter in protons is also predicted but not in neutrons a phenomenon that appears to be documented by recent works This book is not written by a physicist but it also highlights why an academic physicist would have to overcome serious or insurmountable difficulties to give innovative answers to the fundamental unsolved problems of physics using concepts that are different from those currently accepted **The Big Questions: Physics** Michael Brooks, 2013-11-05 The Big Questions series is designed to let renowned experts address the 20 most fundamental and frequently asked questions of a major branch of science or philosophy Each 3000 word essay simply and concisely examines a question that has eternally perplexed enquiring minds and provides answers from history's great thinkers This ambitious project is a unique distillation of humanity's best ideas In Big Questions Physics Michael Brooks answers the 20 key questions What is the point of physics Is everything ultimately random What is time Why is there no such thing as a free lunch What happened to Schrodinger's cat Can I change the universe with a single glance Are solids really solid Which is nature's strongest force Why does an apple fall Do we live in a computer simulation What is light Is Earth's magnetic shield failing Am I unique in the universe Does chaos theory spell disaster Can we travel through time Is string theory really about strings Why does $E=mc^2$ What is the God Particle Why is there something rather than nothing What is the ultimate nature of reality
