Plucked A History Of Hair Removal Biopolitics:

Plucked Rebecca M. Herzig, 2016-11 From using clamshell razors and homemade lye depilatories in the colonial era to using diode lasers and prescription pharmaceuticals in the twenty first century Americans have gone to great lengths to remove body hair deemed unsightly unattractive or unhealthy In *Plucked* Rebecca M Herzig examines both the causes and consequences of routine hair removal in the U S *Plucked* illuminates some of the broad social and environmental effects of seemingly personal choices widespread experimentation on animals exploitation of workers exacerbation of racial divisions and more An engrossing multidimensional history of cultural attitudes toward body hair and the increasingly sophisticated tools used to remove it *Plucked* reveals the complex political significance of even the most mundane activities of modern life Back cover

Plucked Rebecca M. Herzig, 2014 From the clamshell razors and homemade lye depilatories used in colonial America to the diode lasers and prescription pharmaceuticals available today Americans have used a staggering array of tools to remove hair deemed unsightly unnatural or excessive This is true especially for women and girls conservative estimates indicate that 99% of American women have tried hair removal and at least 85% regularly remove hair from their faces armpits legs and bikini lines How and when does hair become a problem what makes some growth excessive Who or what separates the necessary from the superfluous In *Plucked* historian Rebecca Herzig addresses these questions about hair removal She shows how over time dominant American beliefs about visible hair changed where once elective hair removal was considered a mutilation practiced primarily by savage men by the turn of the twentieth century hair free faces and limbs were expected for women Visible hair growth particularly on young white women came to be perceived as a sign of political extremism sexual deviance or mental illness By the turn of the twenty first century more and more Americans were waxing threading shaving or lasering themselves smooth Herzig s extraordinary account also reveals some of the collateral damages of the intensifying pursuit of hair free skin Moving beyond the experiences of particular patients or clients Herzig describes the surprising histories of race science industry and medicine behind today s hair removing tools *Plucked* is an unsettling gripping and original tale of the lengths to which Americans will go to remove hair

Body Odor and Biopolitics Nat Lazakis, 2021-03-08 Originally rooted in stereotypes about race and class the modern norm of bodily odorlessness emerged amid 19th and early 20 century developments in urban sanitation labor relations and product marketing Today discrimination against strong smelling people includes spatial segregation and termination from employment yet goes unchallenged by social justice movements This book examines how neoliberal rhetoric legitimizes treating strong smelling people as defective individuals rather than a marginalized group elevates authority figures into arbiters of odor and drives sales of hygiene products for making bodies acceptable

Men at Risk Shari L. Dworkin, 2015-12-04 Presents a unique approach to HIV prevention at the intersection of sociological and public health research Although the first AIDS cases were attributed to men having sex with men over 70% of HIV infections worldwide are now estimated to occur through sex between women and men

In *Men at Risk* Shari L Dworkin argues that the centrality of heterosexual relationship dynamics to the transmission of HIV means that both women and men need to be taken into account in gender specific HIV AIDS prevention interventions She looks at the costs of masculinity that shape men's HIV risks such as their initiation of sex and their increased status from sex with multiple partners Engaging with the common paradigm in HIV research that portrays only women and not heterosexually active men as being vulnerable to HIV Dworkin examines the gaps in public health knowledge that result in substandard treatment for HIV transmission and infection among heterosexual men both domestically and globally She examines a vast array of structural factors that shape men's HIV transmission risks and also focuses on a relatively new category of global health programs with men known as gender transformative that seeks to move men in the direction of gender equality in the name of improved health Dworkin makes suggestions for the next generation of gender transformative health interventions by calling for masculinities based and structurally driven HIV prevention programming Thoroughly researched and theoretically grounded *Men at Risk* presents a unique approach to HIV prevention at the intersection of sociological and public health research

Mattering Victoria Pitts-Taylor, 2016-08-30 Feminists today are re imagining nature biology and matter in feminist thought and critically addressing new developments in biology physics neuroscience epigenetics and other scientific disciplines *Mattering* edited by noted feminist scholar Victoria Pitts Taylor presents contemporary feminist perspectives on the materialist or naturalizing turn in feminist theory and also represents the newest wave of feminist engagement with science The volume addresses the relationship between human corporeality and subjectivity questions and redefines the boundaries of human non human and nature culture elaborates on the entanglements of matter knowledge and practice and addresses biological materialization as a complex and open process This volume insists that feminist theory can take matter and biology seriously while also accounting for power taking materialism as a point of departure to rethink key feminist issues The contributors an international group of feminist theorists scientists and scholars apply concepts in contemporary materialist feminism to examine an array of topics in science biotechnology biopolitics and bioethics These include neuralplasticity and the brain machine interface the use of biometrical identification technologies for transnational border control epigenetics and the intergenerational transmission of the health effects of social stigma ADHD and neuropharmacology and randomized controlled trials of HIV drugs A unique and interdisciplinary collection *Mattering* presents in grounded concrete terms the need for rethinking disciplinary boundaries and research methodologies in light of the shifts in feminist theorizing and transformations in the sciences

Biocitizenship Kelly E. Happe, Jenell Johnson, Marina Levina, 2018-08-21 A groundbreaking exploration of biocitizenship Citizenship has a long complex relationship with the body In recent years developments in biomedicine and biotechnology as well as a number of political initiatives grassroots efforts and public policies have given rise to new ways in which bodies shape the idea and practices of citizenship or what has been called biocitizenship This book the first collection of essays on the topic of biocitizenship aims to examine biocitizenship as a

mode of political action and expand readers understanding of biopolitics Organized into four distinct sections covering topics including AIDS drug testing on the mentally ill and force feeding prisoners Biocitizenship delves deep into the relationship between private and public identity politics and power Composed of pieces by leading scholars from a wide variety of disciplines Biocitizenship offers a clear and comprehensive discussion on biocitizenship biopolitics and groups that may be affected by this ever growing dialogue Authors address issues familiar to biopolitics scholarship such as gender sexuality class race and immigration but also consider unique objects of study such as incubators dead bodies and corporations Biocitizenship seeks to question who may count as a biological citizen and for what reasons an essential topic in an age in which the body and its health provide the conditions necessary for political recognition and agency

Contesting Intersex Georgiann Davis, 2015-07-10 An elucidating study of the medical management of intersex diagnoses and the political engagement of intersex activists When sociologist Georgiann Davis was a teenager her doctors discovered that she possessed XY chromosomes marking her as intersex Rather than share this information with her they withheld the diagnosis to protect her gender identity it was years before Davis would see her own medical records as an adult and learn the truth Davis s experience is not unusual Historically medical practices that uphold conventional notions of the male female sex binary have led to secrecy about being intersex Yet the rise of intersex activism and visibility in the U S has caused a major shift in thinking calling into question the practice of classifying intersex as an abnormality rather than a mere biological variation In this book Davis draws on interviews with intersex people their parents and medical experts to explore the evolution of thought in regard to intersex visibility and transparency in medical and activist communities A personal and scholarly journey into medical and social activism *Contesting Intersex* presents a unique perspective on how medical diagnoses can affect lives profoundly Winner 2017 Sex and Gender Distinguished Book Award presented by the American Sociological Association Winner 2016 Donald Light Award for the Applied or Public Practice of Medical Sociology presented by the American Sociological Association

Feeling Medicine Kelly Underman, 2020-08-18 Honorable Mention Sociology of the Body and Embodiment Best Publication Award given by the Body and Embodiment Section of the American Sociological Association The emotional and social components of teaching medical students to be good doctors The pelvic exam is considered a fundamental procedure for medical students to learn it is also often the one of the first times where medical students are required to touch a real human being in a professional manner In *Feeling Medicine* Kelly Underman gives us a look inside these gynecological teaching programs showing how they embody the tension between scientific thought and human emotion in medical education Drawing on interviews with medical students faculty and the people who use their own bodies to teach this exam Underman offers the first in depth examination of this essential but seldom discussed aspect of medical education Through studying teaching and learning about the pelvic exam she contrasts the technical and emotional dimensions of learning to be a physician Ultimately *Feeling Medicine* explores what it means to be a good doctor in the

twenty first century particularly in an era of corporatized healthcare Are Racists Crazy? Sander L. Gilman, James Thomas, 2018-09-04 The connection and science behind race racism and mental illness In 2012 an interdisciplinary team of scientists at the University of Oxford reported that based on their clinical experiment the beta blocker drug Propranolol could reduce implicit racial bias among its users Shortly after the experiment an article in Time Magazine cited the study posing the question Is racism becoming a mental illness In Are Racists Crazy Sander Gilman and James Thomas trace the idea of race and racism as psychopathological categories from mid 19th century Europe to contemporary America up to the aforementioned clinical experiment at the University of Oxford and ask a slightly different question than that posed by Time How did racism become a mental illness Using historical archival and content analysis the authors provide a rich account of how the 19th century Sciences of Man including anthropology medicine and biology used race as a means of defining psychopathology and how assertions about race and madness became embedded within disciplines that deal with mental health and illness An illuminating and riveting history of the discourse on racism antisemitism and psychopathology Are Racists Crazy connects past and present claims about race and racism showing the dangerous implications of this specious line of thought for today *Personalized Medicine* Barbara Prainsack, 2017-12-19 Inside today's data driven personalized medicine and the time effort and information required from patients to make it a reality Medicine has been personal long before the concept of personalized medicine became popular Health professionals have always taken into consideration the individual characteristics of their patients when diagnosing and treating them Patients have cared for themselves and for each other contributed to medical research and advocated for new treatments Given this history why has the notion of personalized medicine gained so much traction at the beginning of the new millennium Personalized Medicine investigates the recent movement for patients involvement in how they are treated diagnosed and medicated a movement that accompanies the increasingly popular idea that people should be proactive well informed participants in their own healthcare While it is often the case that participatory practices in medicine are celebrated as instances of patient empowerment or alternatively are dismissed as cases of patient exploitation Barbara Prainsack challenges these views to illustrate how personalized medicine can give rise to a technology focused individualism yet also present new opportunities to strengthen solidarity Facing the future this book reveals how medicine informed by digital quantified and computable information is already changing the personalization movement providing a contemporary twist on how medical symptoms or ailments are shared and discussed in society Bringing together empirical work and critical scholarship from medicine public health data governance bioethics and digital sociology Personalized Medicine analyzes the challenges of personalization driven by patient work and data This compelling volume proposes an understanding that uses novel technological practices to foreground the needs and interests of patients instead of being ruled by them
