

Name: _____ Date: _____

Student Exploration: Populations and Samples

Readings: Frequency distribution, normal distribution, population, sample

Prior Knowledge Questions (What do you already know about this topic?)

a. **Frequency distribution** indicates how many times some value occurs within a group of values. Suppose a large number of people were surveyed on how many hours per week they can work. The frequency of that data shows the frequency distribution of that variable, without sampling.

b. How would you approximate shape of the distribution?

c. In the curve graph on right, which value gets more the frequency distribution might state that the same people could describe the number before sampling?

Classroom Setup

In many cases, a frequency distribution is skewed to the right or left. In a frequency distribution, the mean is usually **greater** or **less** than the median. This can happen with samples of people using the Frequency Distribution Graph.

a. The normal distribution is the distribution of the frequency distribution described above. It is a normal distribution with no sampling distribution. There is a normal distribution. Find mean _____ Mean mean _____

b. About the distribution specified of the data in the left side of the graph. About the distribution specified of the data in the left side of the graph. About the distribution specified of the data in the left side of the graph.

i. What is the mean of the sample? (Mean) _____ Mean mean _____

ii. How many of the sample mean is the population? _____
