

Weather - An Introduction to Weather

by Brad Baker

What does the word "weather" mean to you? What does being able to describe the weather mean? There are thousands of sunny days, rainy days, and stormy days, and there are even more days, perfect for saying to kids, "What do you know about actually *weather*?" The answer, of course, is that weather is tricky. Every year, we have about sixteen different types of weather.

Let's describe a simple definition of weather. Weather is the state of the atmosphere at a given time and place. It can be described by temperature, humidity, wind speed and direction, and air pressure.

Temperature is the measure of how hot or cold the air is. When the sun comes out, it warms the ground, and the ground warms the air. That's what it means to be hot. Temperature is the measure of the heat of the air. The sun warms the air. This process is responsible for many changes in weather, and weather patterns. It's the reason we have different types of weather.

Humidity is the amount of water in the air. The air always has water in it, even though we can't see it. Some of the water is in the air, and some is in the ground. Humidity is the amount of water in the air. It's the reason we have different types of weather.

Wind speed is the measure of how fast the air is moving. The air always has water in it, even though we can't see it. Some of the water is in the air, and some is in the ground. Wind speed is the measure of the heat of the air. The sun warms the air. This process is responsible for many changes in weather, and weather patterns. It's the reason we have different types of weather.

Air pressure is the force of the air. It's the measure of the air. The air always has water in it, even though we can't see it. Some of the water is in the air, and some is in the ground. Air pressure is the measure of the heat of the air. The sun warms the air. This process is responsible for many changes in weather, and weather patterns. It's the reason we have different types of weather.
