

Roller Coasters

Roller coasters don't have engines. They run by forces. Forces can make objects speed up, slow down, or change direction. Their speed comes from racing down the first hill.

Gravity is the force that pulls the car through the coaster. Gravity pulls the coaster toward the earth.

1. The ride starts with an electric motor pulling the coaster up a tall hill. Potential energy (stored energy) occurs.

2. Gravity causes the coaster to drop down the hill and speed up. This turns the potential energy into kinetic energy (energy from motion).

3. The coaster climbs up the next hill and slows because of friction. This creates potential energy again. The ride ends when the brakes cause friction.
