- Earth as a Sphere
 - Pythagoras: First to call the Earth Round
 - Plato: The Earth is spherical
 - Aristotle: Gave first arguments
 - Plato argued that because a sphere is a perfect shape, Earth must be spherical but had no explanation.
 - Aristotle
 - Shape of Earth's shadow at lunar eclipse appears circular.
 - Different stars are visible at northern and southern latitudes.
- So how big is the Earth?
 - First person to attempt to measure the Earth
 - Used shadows cast from sun to calculate the Earth's circumference used to ~40,000km, which was a very accurate estimate
 - Measured the tilt of the Earth axis as 23.5 degrees (gives us seasons)
 - Experiment:
 - Eratosthenes knew that at noon on the summer solstice the sun shone directly to the bottom of a well at Syene (now Aswan), Egypt
 - He found that at the same time, in Alexandria, Egypt, approximately 800 km due north of Syene, the angle of inclination of the sun's rays was about 7.2 degrees
 - He estimated the girth of Earth as 250,000 stadia.
 - How long was a stadion (or stade)?
 - Estimated by modern scholars as between 157 and 167 m
 - Earth's circumference between 39,250 km and 41,750 km.
- Distance to Sun and Moon
 - Aristarchus figured out how to measure the relative distances to the sun and the moon
 - His estimate was a bit off but showed that the Sun was 19 times farther away from the moon.
 - He wasn't close, he was quite far - the sun is 400 times farther from us than the moon
 - Size of the moon
 - He measured the angular size of Earth's shadow on the Moon from the positions of the moon before and after a lunar eclipse. He could then compare this angular size to the angular size of the Moon and estimate the size of the moon relative to Earth.
 - Size of the sun
 - He also reasoned that since the Sun and the Moon have the same angular size, but the Sun was estimated to be 19 times farther away, then the Sun must be 19 times bigger than the moon.
 - Proposed the Heliocentric Solar System.
 - His method was correct but he made an error when measuring the angle. He estimated it was 87 degrees which led to his conclusion that the Sun was 19 times larger than the moon. Theta is actually 15 arcminutes or 0.25 degrees.
- Scaling of Sizes
 - If the Sun were to be represented by 100 mm-diameter softball, how big would Earth be?
 - Jupiter: 10 mm
 - Earth: 1 mm
- Geocentric Model
 - According to Plato, Earth was at the center of the universe. The stars and planets were carried around the Earth on spheres of circles, arranged in the order (outwards from the

Commercial Space Exploration Jai Galliot, 2016-03-09 Not since man set foot on the moon over four decades ago has there been such passion and excitement about space exploration This enthusiasm and eagerness has been spurred on by the fact that for the first time since the very beginning of the space age space travel is no longer limited to an elite group of highly trained and well disciplined military officers and test pilots Instead we must understand that the possibility of commercial space travel is already on our horizon and that it comes with a number of significant practical and moral challenges Our level of scientific development and ability to influence international affairs and policy confers upon us an obligation to study the ethical legal and social considerations associated with space exploration and understanding the potential consequences from the beginning is critical This volume provides the first comprehensive and unifying analysis concerning the rise of private space exploration with a view toward developing policy that may influence real world decision making The plethora of questions demanding serious attention privatisation and commercialisation the impact on the environment health futures risk assessment responsibility and governance are directly addressed in this scholarly work

Plato on Parts and Wholes Verity Harte, 2002-09-19 What is the relation between a whole and its parts Is a whole identical to its parts or is there some other relation of composition These questions are much discussed in modern philosophy but Plato's rich discussion of composition has been neglected Verity Harte provides the first sustained examination of this Platonic discussion and explains its relations to modern debates She reveals how in several late works Plato criticizes the view that a whole is identical to its parts She then goes on to discuss the intriguing alternative conception of wholes he offers in its place This book is an invaluable resource both for scholars of Plato and for modern metaphysicians For scholars of Plato Harte's careful textual analysis provides fresh insights into some of his most difficult works For modern metaphysicians she illuminates the contemporary debate by placing it within an historical context

A Short History of Western Performance Space David Wiles, 2003-10-02 This innovative book provides a historical account of performance space within the theatrical traditions of western Europe David Wiles takes a broad based view of theatrical activity as something that occurs in churches streets pubs and galleries as much as in buildings explicitly designed to be theatres He traces a diverse set of continuities from Greece and Rome to the present including many areas that do not figure in standard accounts of theatre history

Gadamer's Path to Plato Andrew Fuyarchuk, 2010-03-01 Gadamer's Path to Plato investigates the formative years of Hans Georg Gadamer's Plato studies while studying with Martin Heidegger at Marburg University It outlines the evolution of Heidegger's understanding of Plato explains why his hermeneutics and phenomenological method inspired Gadamer and why Heidegger's argument that Plato was responsible for Western civilization's forgetting the meaning of existence provoked him Heidegger's provocation was crucial to the development of Gadamer's understanding of Plato This book thus puts forward an argument for Gadamer's having indirectly refuted Heidegger's Plato This involves a dialogical relationship to the past and a re-examination of the relation of Plato to Aristotle in matters of ethics physics and truth Above all however it is Gadamer's concept of Platonic dialectic that refutes Heidegger This challenge to Heidegger's Plato was commensurate with the origination of Gadamer's positive hermeneutical philosophy In order to test the alleged openness of that philosophy to the other as other Gadamer's reading of the Republic is scrutinized by using the brilliant scholarship of Stanley Rosen An examination of their interpretations of the Republic includes an inquiry into their intellectual influences For Gadamer these include Hegel the Tübingen school and Jacob Klein for Rosen the poetic genius of Leo Strauss Rosen's mathematical and poetic orientation is then compared to Gadamer's dialectical orientation to Plato The mathematical approach dovetails with a theory of human nature and procedural rationalism in Gadamer's hermeneutical philosophy that explains why he in contrast to Rosen bypasses important dimensions of the Republic such as the significance of particular characters and settings to understanding the whole In turn this methodological shortcoming calls into question the truth of Gadamer's method and with it the foundations of a truly open and pluralist society
