The contributions cover a comprehensive range of topics on tunnel engineering, showcasing the latest advancements, insights, and innovations across the following areas: 1 Planning and General Aspects, 2 Design and Methodology, 3 Geotechnics, Geology and Geophysical Prospecting, 4 Ground Stability and Consolidation, 5 Support and Lining, 6 Conventional Tunnelling, 7 Mechanized Tunneling, TBM shield, 8 Immersed Tunnels, 9 Waterproofing and Drainage, 10 Instrumentation and Monitoring, Testing and Inspection, 11 Digital and Information Technology, 12 Machine Learning, 13 Underground Caverns, Underground Space Use, 14 Operational Safety, Maintenance and Repair, 15 Contractual Practices and Risk Management. *Tunnelling for a Better Life* is a must-read for professionals, engineers, owners, and other stakeholders worldwide in tunnelling and underground engineering.

Consolidation Analyses of Soils Jian-Hua Yin, Guofu Zhu, 2020-12-28 When stresses are applied to saturated soil, deformation will occur as water in voids is squeezed out. *Consolidation Analyses of Soils* focuses on the consolidation of fully saturated soils. The book follows a classic approach by beginning with one-dimensional constitutive relations of soils and one-dimensional consolidation. It then moves on to analytical solutions to several one-dimensional consolidation problems and one-dimensional finite strain consolidation. The authors also present a finite element method for consolidation analysis of one-dimensional problems, analytical solutions to consolidation of soil with vertical drains, and a finite difference method for consolidation analysis of one-dimensional problems. Simplified methods for consolidation analysis of soils exhibiting creep are introduced and applied to different cases. Three-dimensional consolidation equations and solutions of typical three-dimensional consolidation problems are covered, as well as simplified finite element consolidation analysis of soils with vertical drain and finite element method for three-dimensional consolidation problems. The book is unique in that it covers both classic solutions and state-of-the-art work in consolidation analyses of soils.  failure modeling under transient water conditions* Wilmer Ferney Morales Peñuela, 2015-11-26 Knowledge of the
 performance of river dykes during flooding is necessary when designing governmental assistance plans aimed to reduce both
 casualties and material damage This is especially relevant when floods have increased in their frequency during the last
 decades together with the resulting material damage and life costs Most of previous attempts for analyzing dyke breaching
 during flooding have neglected to consider the soil mechanics component and the influence of infiltration and saturation
 changes on the failure mechanisms developed in the river dyke This research project aimed to fill that gap in knowledge by
 analyzing in a comprehensive manner the effect of transient water conditions represented by successive flood cycles on the
 seepage conditions and subsequent breaching of dykes Therefore three key sub projects were carried out the analysis of the
 results from an overflow field test the physical modeling of small scaled models under an enhanced gravity field the
 numerical modeling of the flow response and the resulting stability of both the air and water side slopes The results from the
 numerical simulations matched accurately with the results obtained with the centrifuge modeling including the prediction of
 local instabilities during the flood cycles for those dykes that did not include a toe filter *Numerical Methods in
