Partial Least Squares Structural Equation Modeling Necmi K. Avkiran, Christian M. Ringle, 2018-02-16 This book pulls together robust practices in Partial Least Squares Structural Equation Modeling PLS SEM from other disciplines and shows how they can be used in the area of Banking and Finance In terms of empirical analysis techniques Banking and Finance is a conservative discipline As such this book will raise awareness of the potential of PLS SEM for application in various contexts PLS SEM is a non parametric approach designed to maximize explained variance in latent constructs Latent constructs are directly unobservable phenomena such as customer service quality and managerial competence Explained variance refers to the extent we can predict say customer service quality by examining other theoretically related latent constructs such as conduct of staff and communication skills Examples of latent constructs at the microeconomic level include customer service quality managerial effectiveness perception of market leadership etc macroeconomic level latent constructs would be found in contagion of systemic risk from one financial sector to another herd behavior among fund managers risk tolerance in financial markets etc Behavioral Finance is bound to provide a wealth of opportunities for applying PLS SEM The book is designed to expose robust processes in application of PLS SEM including use of various software packages and codes including R PLS SEM is already a popular tool in marketing and management information systems used to explain latent constructs Until now PLS SEM has not enjoyed a wide acceptance in Banking and Finance Based on recent research developments this book represents the first collection of PLS SEM applications in Banking and Finance This book will serve as a reference book for those researchers keen on adopting PLS SEM to explain latent constructs in Banking and Finance

Principles and Practice of Structural Equation Modeling Rex B.

Kline, 2023-05-24 Significantly revised the fifth edition of the most complete accessible text now covers all three approaches to structural equation modeling SEM covariance based SEM nonparametric SEM Pearl's structural causal model and composite SEM partial least squares path modeling With increased emphasis on freely available software tools such as the R lavaan package the text uses data examples from multiple disciplines to provide a comprehensive understanding of all phases of SEM what to know best practices and pitfalls to avoid It includes exercises with answers rules to remember topic boxes and new self tests on significance testing regression and psychometrics The companion website supplies helpful primers on these topics as well as data syntax and output for the book's examples in files that can be opened with any basic text editor

New to This Edition Chapters on composite SEM also called partial least squares path modeling or variance based SEM conducting SEM analyses in small samples and recent developments in mediation analysis Coverage of new reporting standards for SEM analyses piecewise SEM also called confirmatory path analysis comparing alternative models fitted to the same data and issues in multiple group SEM Extended tutorials on techniques for dealing with missing data in SEM and instrumental variable methods to deal with confounding of target causal effects Pedagogical Features New self tests of knowledge about background topics significance testing regression and psychometrics with scoring key and online primers End of chapter suggestions for further reading and exercises with answers Troublesome examples from real data with guidance for handling typical problems in analyses Topic boxes on special issues and boxed rules to remember Website promoting a learn by doing approach including data extensively annotated syntax and output files for all the book's detailed examples

Systems Biology and Antimicrobial Drug Resistance Vijay Soni, Saurabh Mishra, Aditya Kumar Sharma, Neha Dubey, 2024-09-18 Antimicrobial resistance AMR poses a significant threat to global public health With the emergence of new resistant strains and limited antibiotic treatment options it has become increasingly difficult to treat infections effectively This is particularly concerning for bacterial infections like Mycobacterium tuberculosis Acinetobacter spp Staphylococcus aureus and Pseudomonas aeruginosa where only a limited number of antibiotics are available for treatment According to the US National Strategy for Combating Antibiotic Resistant Bacteria approximately 2 million Americans are infected with antibiotic resistant bacteria each year and at least 23 000 die as a result The situation is even worse in developing countries Systems biology which aims to understand the complex interactions between the different components of a biological system has emerged as a powerful tool for studying AMR By integrating data from multiple sources including genomics transcriptomics proteomics and metabolomics systems biology can provide a comprehensive view of the mechanisms underlying AMR This approach can lead to the identification of novel targets for drug development and the development of personalized treatment strategies that consider the specific characteristics of individual patients and the pathogens that infect them This Research Topic aims to explore the potential of systems biology in combating antibiotic resistance and highlight the need for further research to fully realize its clinical potential in infectious diseases Mastering Partial Least
