

Activity 2.2.2 Universal Gates: NAND Only Logic Design

Introduction

The block diagram shown below represents a voting booth monitoring system. For privacy reasons, a voting booth can only be used if the booth on either side is unoccupied. The monitoring system has four inputs and two outputs. Whenever a voting booth is occupied, the corresponding input (**A**, **B**, **C**, & **D**) is a (1). The first output, **Booth**, is a (1) whenever a voting booth is available. The second output, **Alarm**, is a (1) whenever the privacy rule is violated.

In this activity you will implement NAND only combinational logic circuits for the two outputs **Booth** and **Alarm**. These NAND only designs will be compared with the original AOI implementations in terms of efficiency and gate/IC utilization. In a future activity, these NAND only designs will be compared to the circuits implemented using only NOR gates.
