Clarke, Richard Messnarz, 2020-08-10 This volume constitutes the refereed proceedings of the 27th European Conference on Systems Software and Services Process Improvement EuroSPI conference held in D sseldorf Germany in September 2020 The 50 full papers and 13 short papers presented were carefully reviewed and selected from 100 submissions They are organized in topical sections on visionary papers SPI manifesto and improvement strategies SPI and emerging software and systems engineering paradigms SPI and standards and safety and security norms SPI and team performance agile innovation SPI and agile emerging software engineering paradigms digitalisation of industry infrastructure and e mobility good and bad practices in improvement functional safety and cybersecurity experiences with agile and lean standards and assessment models recent innovations virtual reality The conference was partially held virtually due to the COVID 19 pandemic *Lean Management System LMS:2012* William A. Levinson, 2017-07-27 The success of a Lean manufacturing program depends far more on organization wide leverage of Lean manufacturing tools than it does on the tools themselves To this the organization must add the human relations aspects that earn buy in and engagement by all members of the workforce to the extent that workers will react immediately and decisively to the presence of waste The synergy of the human and technological aspects of Lean form what Henry Ford called a universal code for the achievement of world class results in any enterprise and which he put into practice to deliver unprecedented bottom line results This book expands upon and systemizes this universal code into a structure or framework that promotes organizational self audits and continuous improvement The book s first section offers a foundation of four simple but comprehensive Lean key performance indicators KPIs waste of the time of things as in cycle time waste of the time of people waste of energy and waste of materials The Toyota Production System s seven wastes are all measurable in terms of these four KPIs which also cover the key metrics of Eliyahu Goldratt s theory of constraints throughput inventory and operating expense The first section then adds a proactive improvement cycle that sets out to look for trouble by isolating processes for analytical purposes and measuring and then balancing inputs and outputs to force all wastes to become visible It is in fact technically impossible for any waste of material or energy to hide from what chemical engineers call a material and energy balance Application of this book s content should therefore satisfy most provisions of the ISO 14001 environmental management system standard and the new ISO 50001 energy management system standard The second section consists of an unofficial and therefore customizable standard against which the organization **Automotive Quality Systems Handbook** David Hoyle, 2000-07-28 The Automotive Quality Systems Handbook is a step by step guide to interpreting and implementing the ISO TS 16949 Accepted by major vehicle manufacturers as an alternative to the existing US German French and Italian automotive quality system requirements this Technical Specification defines specific requirements for the application of ISO 9001 1994 throughout the automotive supply chain While initially the standard will be voluntary for the first time second and third tier suppliers may be faced with pressure to undergo third party registration After the year 2000 the next version of the standard has actually replaced the four existing standards AVSQ EAQF QS 9000

and VDA 6.1 and the price of entry to the global automotive market is conformance to this new standard. This handbook is an essential and comprehensive guide to enable organizations to interpret and implement the ISO TS 16949. Unlike other books on the subject, each element, clause, and requirement is analyzed in detail with guidance provided for its implementation. The handbook is written primarily for implementers and discerning managers, for instructors and auditors, and contains a range of solutions that would be acceptable in the automobile industry. It includes details of the certification scheme, the differences with existing standards, check lists, questionnaires, tips for implementers, flow charts, and a glossary of terms. This book gives more than an overview; it tells how to do it. Contains detailed instructions and check lists for implementation. Addresses all ISO requirements.

Proceedings of the XVII International symposium SymOrg 2020 Dušan Starčević, Sanja Marinković, 2020-06-30. Ever since 1989 the Faculty of Organizational Sciences, University of Belgrade, has been the host of SymOrg, an event that promotes scientific disciplines of organizing and managing a business. Traditionally, the Symposium has been an opportunity for its participants to share and exchange both academic and practical knowledge and experience in a pleasant and creative atmosphere. This time, however, due to the challenging situation regarding the COVID-19 pandemic, we have decided that all the essential activities planned for the International Symposium SymOrg 2020 should be carried out online between the 7th and the 9th of September 2020. We are very pleased that the topic of SymOrg 2020, Business and Artificial Intelligence, attracted researchers from different institutions both in Serbia and abroad. Why is artificial intelligence a disruptive technology? Simply because it significantly alters the way consumers, industries, or businesses operate. According to the European Commission document titled "Artificial Intelligence for Europe 2018," AI is a key disruptive technology that has just begun to reshape the world. The Government of the Republic of Serbia has also recognized the importance of AI for the further development of its economy and society and has prepared an AI Development Strategy for the period between 2020 and 2025. The first step has already been made: the Science Fund of the Republic of Serbia, after a public call, has selected and financed twelve AI projects. This year, more than 200 scholars and practitioners authored and co-authored the 94 scientific and research papers that had been accepted for publication in the Proceedings. All the contributions to the Proceedings are classified into the following 11 sections: Information Systems and Technologies in the Era of Digital Transformation; Smart Business Models and Processes; Entrepreneurship; Innovation and Sustainable Development; Smart Environment for Marketing and Communications; Digital Human Resource Management; Smart E-Business; Quality 4.0; and International Standards Application of Artificial Intelligence in Project Management; Digital and Lean Operations Management; Transformation of Financial Services; Methods and Applications of Data Science in Business and Society. We are very grateful to our distinguished keynote speakers: Prof. Moshe Vardi, Rice University, USA; Prof. Blaž Zupan, University of Ljubljana, Slovenia; Prof. Vladan Devedić, University of Belgrade, Serbia; Milica Jović, PhD, Director, Science Fund of the Republic of Serbia; and Harri Ketamo, PhD, Founder, Chairman of HeadAI Ltd, Finland.
