Improving Urban Science Education Kenneth Tobin, Rowhea Elmesky, Gale Seiler, 2005-04-07 Many would argue that the state of urban science education has been static for the past several decades and that there is little to learn from it Rather than accepting this deficit perspective Improving Urban Science Education strives to recognize and understand the successes that exist there by systematically documenting seven years of research into issues salient to teaching and learning in urban high school science classes Grounded in the post structuralism of William Sewell and brought to life through the experiences of different students teachers and school settings in Philadelphia this book shows how teachers and students can work together to enact meaningful science education when social and cultural differences as well as inappropriate curricula often make the challenges seem insurmountable Chapters contain rich images of urban youth and each strives to offer insights into problems and suggestions for resolving them Most significant in spite of the challenges the research offers hope and shows that fresh approaches to teaching and learning can lead students some who have already been pronounced academic even societal failures to becoming avid and deep learners of science

Resources in Education, 1998 Teaching Chemistry Around the World Björn Risch, 2010 As teachers we often tend

to expect other countries to teach chemistry in much the same way as we do but educational systems differ widely At Bielefeld University we started a project to analyse the approach to chemical education in different countries from all over the world Teaching Chemistry around the World 25 countries have participated in the project The resulting country studies are presented in this book This book may be seen as a contribution to make the structure of chemistry teaching in numerous countries more transparent and to facilitate communication between these countries Especially in the case of the school subject chemistry which is very unpopular on the one hand and occupies an exceptional position on the other hand due to its relevance to jobs and everyday life and most notably due to its importance for innovation capacity and problem solving we have to learn from each others educational systems

New Trends in Natural and Synthetic Polymer Science Cornelia Vasile, Gennadii Efremovich Zaikov, 2006 This collection of texts written by well recognised specialists was constituted having in view these important directions of actual research Sustainable economical growth requires safe resources of raw materials for the industrial production Today s most frequently used industrial raw material petroleum is neither sustainable because limited nor environmentally friendly While the economy of energy can be based on various alter native raw materials such as wind sun water biomass as well as nuclear fission and fusion the economy of substances is fundamentally depending on biomass in particular biomass of plants In the last decades because of the crude oil and other natural resources crisis a new alternative has been proposed consisting in utilisation of renewable natural resources as feedstock and fuel among which the

biomass is the most promising **Focus on Natural and Synthetic Polymer Science** Cornelia Vasile, Gennadiï Efremovich Zaikov, 2006 Polymers are substances containing a large number of structural units joined by the same type of linkage These substances often form into a chain like structure Starch cellulose and rubber all possess polymeric properties Today the polymer industry has grown to be larger than the aluminium copper and steel industries combined Polymers already have a range of applications that far exceeds that of any other class of material available to man Current applications extend from adhesives coatings foams and packaging materials to textile and industrial fibres elastomers and structural plastics Polymers are also used for most composites electronic devices biomedical devices optical devices and precursors for many newly developed high tech ceramics This book presents leading edge research in this rapidly changing and evolving field
