

Renal Cell Carcinoma (RCC) Study Guide

1. What is renal cell carcinoma (RCC)?
 - RCC is a type of kidney cancer that affects the cells in the lining of the small tubes (tubules) in the kidneys. The kidneys are a pair of bean-shaped organs located in the abdomen that are responsible for filtering waste and excess fluids from the bloodstream and regulating blood pressure and electrolyte levels in the body. RCC is the most common type of kidney cancer, accounting for about 85-90% of all kidney cancers.
2. What are the risk factors for RCC?
 - Risk factors for RCC include smoking, obesity, high blood pressure, long-term dialysis treatment, and certain genetic conditions such as Von Hippel-Lindau disease and hereditary papillary renal cell carcinoma. Occupational exposure to certain chemicals and substances, such as cadmium and trichloroethylene, may also increase the risk of developing RCC.
3. What are the symptoms of RCC?
 - Symptoms of RCC may include blood in the urine, pain in the side or lower back, fatigue, and unexplained weight loss. These symptoms may be similar to those of other conditions, such as urinary tract infections, and may not always be indicative of RCC.
4. How is RCC diagnosed?
 - RCC is typically diagnosed through a combination of tests, including a physical exam, imaging tests (such as CT scan or MRI), and biopsy (removal of a small sample of tissue for examination).
5. How is the stage of RCC determined?
 - The stage of RCC is determined based on the size and location of the tumor, whether it has spread to nearby lymph nodes or other organs, and the presence or absence of symptoms.
6. What are the treatment options for RCC?
 - Treatment options for RCC may include surgery to remove the tumor, chemotherapy, and radiation therapy. In some cases, a combination of these treatments may be recommended.
7. What is the prognosis for RCC?
 - The prognosis for RCC depends on the stage of the cancer at diagnosis, the presence or absence of symptoms, and the response to treatment. In general, the 5-year survival rate for RCC is about 60-70%. However, early detection and treatment of RCC can significantly improve the chances of a successful outcome.
