Director The Connie Belin Jacqueline N Blank International Center for Gifted Education and Talent Development The University of Iowa Frances Spielhagen's book offers a thoughtful and detailed response to one of the most important questions of our time: should all students take algebra in 8th grade? With impressive and thorough research, the author considers issues of teaching and learning as well as curriculum and policy. For all those who care about the mathematical future of our nation's children, this book is a must read. Jo Boaler, Professor of Mathematics Education, Stanford University, The School of Education. In *The Algebra Solution to Mathematics Reform*, Frances R. Spielhagen shows vividly and precisely how a public school system teaches children to master mathematics skills early, culminating in 8th grade algebra, a critical subject for high school graduation and college admission. Spielhagen's book precisely demonstrates how to improve real sequential learning for students from the early grades to high school graduation and successfully into college and life. Thus, this vital book has implications for instruction in all academic subjects, providing a living model for continuity and improvement of student learning. Bruce S. addresses some of the hidden mathematical connections in soliton theory which have been revealed over the last half century. It aims to convince the reader that like the mirrors and hidden pockets used by magicians the underlying algebro-geometric structure of soliton equations provides an elegant and surprisingly simple explanation of something seemingly miraculous. Assuming only multivariable calculus and linear algebra as prerequisites, this book introduces the reader to the KdV Equation and its multisoliton solutions, elliptic curves and Weierstrass w_p functions, the algebra of differential operators, Lax Pairs and their use in discovering other soliton equations, wedge products and decomposability, the KP Equation and Sato's theory relating the Bilinear KP Equation to the geometry of Grassmannians. Notable features of the book include careful selection of topics and detailed explanations to make this advanced subject accessible to any undergraduate math major, numerous worked examples and thought-provoking but not overly difficult exercises, footnotes and lists of suggested readings to guide the interested reader to more information, and use of the software package Mathematica to facilitate computation and to animate the solutions under study. This book provides the reader with a unique glimpse of the unity of mathematics and could form the basis for a self-study, one-semester special topics or capstone course.
