

## Rocks and Weathering (pages 38–45)

### Weathering and Erosion (page 39)

**Key Concept:** Weathering and erosion work together continuously to wear down and carry away the rocks at Earth's surface.

- **Weathering** is the breaking down of rocks and other materials at Earth's surface. There are two kinds of weathering: mechanical weathering and chemical weathering.
- Weathering is caused by heat, cold, water, ice, and gases in the air. For example, heat and cold crack rocks into smaller pieces.
- **Erosion** (ee ROH zhun) is the movement of rock pieces and other materials on Earth's surface. Erosion is caused by wind, water, ice, and gravity. Erosion carries away the rock pieces made by weathering.

Challenging Science Standards Charles R. Ault Jr., 2015-08-06 For several decades educators have struggled to identify the attributes all sciences have in common In the popular mind this effort constitutes the importance of teaching the scientific method In the policy maker s world this pursuit yields standards for all Americans that unify the sciences For

teachers the quest for unity has typically meant teaching science as process However a curriculum that prioritizes what all sciences have in common obscures their vital differences For example studying landslides is very different from doing x ray diffraction climate science is unlike medical research Na ve ideas about scientific unity impoverish the public s ability to evaluate scientific enterprises Challenging Science Standards voices skepticism towards the quest for unity Through analyses of disciplinary knowledge school curricula and classroom learning the book uncovers flaws in the unifying dimensions of the science standards It proposes respect for disciplinary diversity and attention to questions of value in choosing what science to teach Illuminated by vignettes of children and adolescents studying topics ranging from snail populations to horse fossils Challenging Science Standards proposes promising remedies *Conference Proceeding.
