Scientific and Technical Aerospace Reports ,1991 *Using the Engineering Literature, Second Edition* Bonnie A. Osif,2011-08-09 With the encroachment of the Internet into nearly all aspects of work and life it seems as though information is everywhere However there is information and then there is correct appropriate and timely information While we might love being able to turn to Wikipedia for encyclopedia like information or search Google for the thousands of links on a topic engineers need the best information information that is evaluated up to date and complete Accurate vetted information is necessary when building new skyscrapers or developing new prosthetics for returning military veterans While the award winning first edition of *Using the Engineering Literature* used a roadmap analogy we now need a three dimensional analysis reflecting the complex and dynamic nature of research in the information age *Using the Engineering Literature Second Edition* provides a guide to the wide range of resources available in all fields of engineering This second edition has been thoroughly revised and features new sections on nanotechnology as well as green engineering The information age has greatly impacted the way engineers find information Engineers have an effect directly and indirectly on almost all aspects of

our lives and it is vital that they find the right information at the right time to create better products and processes Comprehensive and up to date with expert chapter authors this book fills a gap in the literature providing critical information in a user friendly format External Corrosion and Corrosion Control of Buried Water Mains Andrew E. Romer,2004 Water utilities often do not know the specific cause of external corrosion observed on their water mains and consequently the chosen preventative measure may not work effectively Historically these choices are based on data from other industries e g gas and oil and may not be suitable for the water industry Corrosion of metallic pipes can be caused by a variety of mechanisms each of which requires a different solution Determining which corrosion mechanism is at work is not a simple matter because the resulting pipe damage looks similar for all of them The failure to properly identify corrosion sources may produce prevention systems that are ineffective or do not last For example it is not effective to install an anode bag on a main that has a bacteriological corrosion problem Similarly an anode bag installed to reduce corrosion caused by a stray impressed current would be quickly used up and would provide only short term protection Much recent research on corrosion has focused on internal corrosion primarily related to water quality issues such as lead and copper control and red water This project will examine external corrosion which affects the structural integrity of the pipe and makes it vulnerable to leaks and breakage After identifying the causes of external corrosion the study will find economical solutions for each type of corrosion and verify them through field trials
