Perfumes P.M. Muller,D. Lamparsky,2012-12-06 The idea of publishing this book on Perfumes Art Science and Technology grew out of the observation that on the verge of the 1990s there was really no state of the art compilation of the relevant know how on which the fragrance industry is based It was obvious that such a compilation would be well received not only by perfumers and fragrance chemists but also by those involved in related trade and marketing or in the development and distribution of consumer products by researchers from other fields by students and finally by amateurs of perfumes in general Therefore we set out to find competent authors who were willing to contribute to the endeavour and we did not do this unselfishly on the contrary we selected a wish list of specialists who would provide us with new insight and

characterize the trends and research priorities determining the future. Thus we were counting on learning much ourselves in the course of the project. We were more than pleasantly surprised by the reactions to our first letter and so was Elsevier. We certainly had not expected perfumers who are usually much more doers than writers to react in such an enthusiastic way, especially the spontaneous affirmative answer from the famous E. Roudnitska, created a momentum which contributed significantly to the successful completion of this book. But of course we should not create the impression that the other authors' chapters are less important and we thank all of them heartily for their invaluable effort.

This book provides an introduction to terpenoid chemistry, concentrating on the lower terpenoids, but the basic principles taught are also the foundation for the chemistry of the higher terpenoids. Coverage includes the biogenesis of terpenoids, some of the history of the field, the principles of structural determination, and the importance of stereochemistry and stereoselective synthesis. Carbocation chemistry is introduced, as are the principles of total and partial synthesis. Finally, industrial chemistry, both discovery chemistry and chemical process development, is discussed using the volatile terpenoids of perfumery to illustrate basic concepts. Ideal as both an introduction to terpenoid chemistry and as a refresher course, *A Fragrant Introduction to Terpenoid Chemistry*, with its real-life problems and appreciation of the relevance of chemistry to everyday life, will prove invaluable to students, lecturers, and industrialists alike.
